FOREWORD

We have the great pleasure to present the National Report on the Final Results of the first ever Timor-Leste Census of Agriculture (TLAC), conducted in 2019. These results provide a detailed portrait of Timor-Leste's agriculture sector, based on data collected from farm households, farm institutions and Suco chiefs, using three questionnaires. This report uses the TLAC 2019 to provide a national overview of key features of our country's agricultural sector, with additional reports expected in due course.

The entire data covers about 213.42 thousand households with 1.21 million persons, and detailed agricultural data collected from the 141.14 thousand agriculture households in Timor-Leste in 2019.

The release of the Final Results of the first TLAC 2019 marks a first important stage in the statistical history in Timor-Leste, and builds on other firsts. In Asia and the Pacific, Timor-Leste is one of the first countries to implement an agriculture census using the methodology of the 2020 round of the World Census of Agriculture (WCA2020). We are also among the first in the region to use tablets, digital questionnaires, and hand-held GPS devices for data collection.

We would like to express our deep gratitude to the Prime Minister of the Democratic Republic of Timor-Leste for his steadfast support, which enabled these innovations and successful completion of the census. It was our privilege and pleasure to function as Chairman of the National Census Committee. To the Seventh Government, we also thank for the effort of initiating and preparing legal base of TLAC implementation.

We would like to thank the members of the National Census Committee and of the Capital and Municipality Governors for their collaboration and support. Our thanks are due also to the Press, the Radio and the TV who played a very important role in census publicity.

On behalf of the Government of Timor-Leste, we would like to thank FAO for providing financial and technical assistance and other development partners of the for their assistances to the TLAC 2019. Our deep appreciation goes to all staffs of the Directorate General Statistics (GDS), Ministry of Finance and the Ministry of Agriculture and Fisheries who involved in various stages of the activities for their efforts, support and good work in making the census a success.

The major share of the credit for the success of the TLAC 2019, however, is reserved for the peoples of Timor-Leste, who shared information about themselves and their agricultural activities. It also goes to the hardworking officers who implemented TLAC2019, including enumerators, supervisors, Suco chiefs, and municipality census officers of GDS, the Ministry of Finance and the Ministry of Agriculture and Fisheries.

We extend our deep appreciation to the team led by the Director General of Statistics in the core technical working group for their effort in making the census a success.

We hope that Ministries, institutions, organizations, international agencies, researchers, policy makers and the public will find this report useful.

D li, October 2020

Sara Lobo Brites
Acting Minister of Finance

Pedro dos Reis
Minister for Agriculture and Fisheries

NATIONAL COMMITTEE FOR THE TIMOR-LESTE AGRICULTURE CENSUS 2019

THE STERRING COMITEE HAVE THE FOLLOWING MEMBERS:

- 1. THE PRIMER MINISTER, AS CHAIR;**
- 2. THE MINISTER OF FINANCE, AS VICE-CAHIR I;**
- 3. THE MINISTER OF AGRICUKTURE AND FISHERIES, AS VICE-CHAIR II;**
- 4. THE MINISTER OF STATE ADMINISTRATION;**
- 5. THE MINISTER OF PLANNING AND STRATEGIC INVESTMENT;**
- 6. THE MINISTER OF COMMERCE, INDUSTRY AND ENVIROMENT;**
- 7. THE MINISTER OF SOCIAL SOLIDARITY AND INCLUSION;**
- 8. THE MINISTER OF HELATH;**
- 9. THE MINISTR OF JUSTICE;**
- 10. THE MINISTRY OF INTERIOR;**
- 11. THE SECRETARY OF STATE FOR THE SUPPORT AND SOCIAL ECONOMICAL PROMOTION AND WOMEN;**
- 12. THE SECRETARY OF STATE FOR SOCIAL COMMUNICATION;**
- 13. THE SECRETARY OF STATE FOR EMPLOYMENT POLICY AND VOCATIONAL TRAINNING;**
- 14. THE CHAIR AND THE VICE-CHAIR FOR THE TEHCNICAL COMMITTEE.**

TECHNICAL COMMITTEE FOR THE TIMOR-LESTE AGRICULTURE CENSUS 2019

The technical Committee have the following members:

1. The Director General os Statistics, Ministry of Finance, as a chair;
2. The Secretary General of the Ministry of Agriculture and Fisheries, as Vice-Chair I;
3. The Director General of Adminsitration Decentralization, as Vice-Chair II;
4. The Director General of State Finance;
5. The Director General of Livestock and Veterinary;
6. The Director General of Agriculture;
7. The Director General of Forestry, Coffee and Industrial Plants;
8. The Director General of Fisheries;
9. The Director General of Operational Service from Minister of Interior;
10. The Director General from Secretary of State for Employment Policy and Vocational Trainning;
11. The Director General from the Secretary of State for the Support and Social Economic Promotion of Women;
12. The National police of Timor-Leste General Commader;
13. The Minister pf Agriculture and Fisheries Regional Directors;
14. The Regional Secretary of Agriculture and Rural Development;
15. The National Director of Land, Property and Cadastral Services;

The Secretariat Members

- 1) National Director of Research, Statistic and Geographic Information as Execut Secretary
- 2) Focal point of MAF as Assistant Executive Secretary
- 3) Focal points of MAF and MF of administration and finance
- 4) Focal points of MAF and MF of logistic procurement
- 5) Focal points of MAF and MF of human resources
- 6) Focal points of MAF and MF of information, communication, mapping and an ALGIS.

PUBLICITY COMMITTEE FOR THE TIMOR-LESTE AGRICULTURE CENSUS 2019

The Publicity committee has the following members:

1. The National Director of Systems and Reports, as Chair;
2. The Chief Department of ALGIS, Agro-Meteorology and Statistics, as Vice-Chair;
3. The Minister of Agriculture and Fisheries, focal point for Statistics;
4. The Minister of Agriculture and Fisheries, focal point for information technology;
5. The Minister of Agriculture and Fisheries, focal point for communication;
6. The Minister of Finance, focal point of the Communication and Information office;
7. The Secretariat of State for Social Comuniaction's focal point;

SUMMARY INDICATORS

Household Agricultural Holdings	
The TLAC 2019 utilized three questionnaires for the agriculture census. Form-1 was used in the listing phase, in which households and institutions were enumerated on a census basis. Form-2 and Form-3 were used for detailed data collection, and implemented almost simultaneously. Form-2, administered to farm households and farm institutions, collected data on the agricultural activities of farm households and farm institutions. Form-3, administered to the village (suco) leaders, collected information on suco particulars, such as suco level infrastructure, calamities/disasters, and economic activities.	
Below the level of the municipality, the country is composed of two administrative units with the smallest unit of administration defined as the village (suco), followed by the sub-municipality. Timor-Leste's 452 villages are clustered within 64 sub-municipalities, which are grouped within 13 municipalities. Some of the key estimates obtained from the TLAC 2019 are presented below for the country as a whole.	
LISTING STAGE: LISTING OF HOUSEHOLDS AND INSTITUTIONS	
Number of enumeration areas (EAs) enumerated	2237
Total population enumerated	1 208 070
Total number of households listed	213 417
Total number of agriculture household holdings listed	141 141
Total number of farm institutions listed	597
AGRICULTURAL HOLDINGS AND LAND TENURE	
Number of households listed with agricultural holdings (engaged in growing of crops on at least 0.02 ha and/or with minimum of 2 large livestock, and/or 3 small livestock and/or 10 poultry)	141 141
Total area of all household agricultural holdings including homesteads (thousand hectare)	2 16.2
Total institutional holdings listed	579
Total area (ha.) of institutional farm holdings	3 070
Percentage of households with agricultural holdings to total households listed	66%
Percentage of households engaged in growing of crops on agricultural lands to total households with agricultural activities	90%
Number of households engaged only in fishing activity at least for 15 days during last months prior to the day enumeration	3 632
Number of households engaged only in aquaculture activity at least for 15 days during last months prior to the day enumeration	2 069
Number of individual household agriculture holdings	98%
Number of joint household agriculture holdings	2%
Percentage of household agriculture holdings operated by males	85%
Percentage of household agriculture holdings operated by females	15%
Average number of parcels per household agricultural holding	1.5
Percentage of household agricultural holdings with 1 to 3 parcels	95%
Average area per parcel in household agricultural holding	1.01 ha.

Average area of household agricultural holding: Timor-Leste		1.53ha.
i) Operated by male holders		1.55ha.
ii) Operated by female holders		1.43ha.
Percentage of household agricultural holdings of size less than 1 ha from the total of household agricultural holdings		66%
Percentage of area occupied by household agricultural holdings of size less than 1 ha from the total area of household agricultural holdings		8%
Percentage of household agricultural holdings of size 10 ha or more from the total of household agricultural holdings		2%
Percentage of land area occupied by household agricultural holdings of size 10 ha or greater from the total area of household agricultural holdings		52%
Percentage of household agricultural holdings in which temporary crops grown		70%
Percentage of household agricultural holdings in which permanent crops grown		45%
Percentage of parcels of agricultural household holdings owned (with certificate from Portuguese, or from Indonesia, or with other numero referensia or certificate, or owned without certificate)		96%
CROP CULTIVATION		
Gross cultivated area (ha.) of household agricultural holdings during the reference period		509 226.5
Percentage of area (gross) planted to temporary crops/plants only from the total area of household agricultural holdings		23.2%
Percentage of area (gross) planted to permanent crops/plants only from the total area planted to cereal and grain crops		3.9%
Percentage of area (gross) planted to both temporary and permanent crops/plants from the total area planted to cereal and grain crops		62.9%
Percentage of area (gross) planted to corn crop from the total cultivated area of household agricultural holdings		18.0%
Percentage of area (gross) planted to rice crop from the total cultivated area of household agricultural holdings		7.6%
Percentage of area (gross) planted to cassava crop from the total cultivated area of household agricultural holdings		7.4%
Percentage of area (gross) planted to coffee crop from the total cultivated area of household agricultural holdings		6.3%
Percentage of area (gross) under scatter planting/cropping from the total cultivated area of household agricultural holdings		66.4%
Percentage of area (gross) under mixed cropping/planting from the total cultivated area of household agricultural holdings		46.2%
Percentage of area (gross) under monoculture from the total cultivated area of household agricultural holdings		14.5%
Percentage of household agricultural holdings reporting cultivation did not till their land		51%
Of them who tilled their land:		
Percentage of holdings did conventional tillage		67%
Percentage of holdings tilled land with manual power		63%
Percentage of holdings tilled land with machine power		33%

Percentage of household agricultural holdings irrigated land	20%
Percentage of household agricultural holdings irrigated land using surface water	68%
Percentage of household agricultural holdings irrigated land using surface and/or underground water	25%
Percentage of household agricultural holdings irrigated land using ‘natural flow irrigation’ method	53%
Percentage of household agricultural holdings irrigated land free of any charge	79%
Percentage of agricultural household holdings reported to use fertilizers	6%
Percentage of agricultural household holdings reported to use inorganic fertilizers from all households reported to use fertilizers	37.5%
Percentage of agricultural household holdings reported to use organic fertilizers from all households reported to use fertilizers	63.3%
Percentage of agricultural household holdings reported to use bio-fertilizer from all households reported to use fertilizers	3.4%
Percentage of agricultural household holdings reported use of some type of plant protection	6%
Percentage of agricultural household holdings reported reported source of self-produced seed/material from those reported use of seeds/planting materials	91%
Percentage of agricultural household holdings reported source of government seed/material from those reported use of seeds/planting materials	1%
Percentage of agricultural household holdings received or accessed information on agricultural extension services	12%
<i>Of them from:</i>	
Government	53.5%
Radio	55.7%
Television	50.8%
Other farmers	45.9%
NGO	45.0%
LIVESTOCK AND POULTRY REARING	
Percentage of agricultural households keeping or raising livestock and/or poultry to total number of agricultural households	95%
Among those households keeping or raising livestock:	
Percentage of agricultural households keeping or raising large livestock	62%
Percentage of agricultural households keeping or raising small livestock	92%
Percentage of agricultural households keeping or raising poultry	82%
Percentage of agricultural households keeping and raising pigs from all households keeping and raising small livestock	74%
Percentage of agricultural households keeping and raising 2 or more large animals from total agricultural households keeping and raising large livestock	75%
Average number of livestock and poultry birds raised or kept per agricultural households keeping or raising livestock and/or poultry	16.9
Average number of large head livestock raised or kept per agricultural households keeping or raising livestock and/or poultry	3.4
Average number of small head livestock raised or kept per agricultural households keeping or raising livestock and/or poultry	4.9
Average number of Pig (Fahi) raised or kept per agricultural households keeping or raising livestock and/or poultry	3.4

Average number of poultry birds raised or kept per agricultural households keeping or raising livestock and/or poultry	8.6
Percentage of agricultural households rearing less than 10 poultry birds from total agricultural households keeping or raising poultry	57%
Percentage of agricultural households rearing 50 or more poultry birds from total agricultural households keeping or raising poultry	2%
Percentage of Agricultural Households reporting use of any of the veterinary services from total agricultural households keeping or raising poultry	6%
FISHING AND AQUACULTURE	
Number of households engaged in fishing and/or aquaculture from listed households	7 768
Number of households engaged in fishing from the agriculture households	4 405
Percentage of agriculture households engaged in fishing pursued the activities for few days to few weeks during the last 12 months prior to the day of enumeration	48%
Percentage of agricultural households engaged in fishing who did not use any vessel for fishing	25%
Percentage of agricultural households engaged in fishing mainly to meet household consumption and occasional needs from the total number of households engaged in fishing	60%
Number of households engaged in aquaculture from listed households	3 813
Number of households engaged in aquaculture from agriculture households	4 543
Percentage of agriculture households engaged in aquaculture pursued the activities for few days to few weeks during the last 12 months prior to the day of enumeration	56%
AGRICULTURAL HOUSEHOLDS AND POPULATION	
Estimated population of households with agricultural holdings	764 216
Sex ratio (no. of females per 1000 males) among population of households with agricultural holdings	986
Average size of an agriculture household	5.4
Percentage of male heads to total male population	29%
Percentage of female heads to total female population	6%
Percentage of agricultural population of 3 years or more reported no schooling:	30%
Among males	28%
Among females	33%
Percentage of agricultural population of 3 years or more completed secondary and above level of education	20%
Percentage of agricultural population of 10years or more worked during last 7 days prior to the day of enumeration:	32%
Among males	50%
Among females	13%

CHAPTER ONE: SCOPE, COVERAGE AND METHODOLOGY

INTRODUCTION

The Census of Agriculture of Timor-Leste, conducted in 2019 (TLAC2019), was a comprehensive statistical undertaking for the collection and compilation of information on crop cultivation, raising of livestock and poultry, and fishing and aquaculture activities. The data collected and generated from this census provides necessary evidence for the formulation of plans, policies and programs to develop and improve the agriculture and fisheries sectors in the Timor-Leste (TL). TLAC2019 was the first census of agriculture conducted in the Timor-Leste, one of the first agriculture censuses conducted in Asia and the Pacific under the 2020 round of the World Census of Agriculture (WCA), and one of the first in the region to use Computer-assisted personal interviewing (CAPI) and hand-held GSP instruments for land area measurement.

The General Directorate of Statistics (GDS) of the Ministry of Finance, and the Ministry of Agriculture and Fisheries (MAF), were the responsible government ministries authorized to undertake the TLAC 2019. While GDS had the mandate to conduct the census, MAF was the primary user of the data produced from the census.

OBJECTIVE

The main objective of the TLAC 2019 was to provide structural data on Timor-Leste's agriculture sector and temporal data on the agricultural situation in the country, to serve as the base for evidence-based program and policy development and monitoring. Specifically, the census provides:

1. Data on the current structure of the country's agricultural holdings, including crop production, livestock rearing, and poultry, fishery and aquaculture activities;
2. Data at the smallest administrative unit in the country; and,
3. A sampling frame to conduct future agricultural surveys;

The summary statistical tables annexed to this report present overview of findings at the national, municipal (district) and sub-municipal (sub-district) levels. In addition, there is a very large and detailed data set accurate to village (soco) level, accessible through GDS. Agriculture census questionnaires, available from the GDS website, provide more detailed information on its full scope. These data create the potential for a wide range of analyses to be conducted that are well beyond the scope of this report.

APPROACH

The methodology used for data collection built on the FAO guidelines of the 2020 round of the World Census of Agriculture (WCA2020), covering all recommended core items and additional information necessary to inform Timor-Leste's agriculture sector research, programme and policy planning needs. The broad data collection approach for the TLAC was to identify and approach all agricultural households in all of Timor-Leste. Census enumerators were trained and mobilized in all municipalities for this massive undertaking. Of the 213 thousand households in Timor-Leste, 141.14 thousand were identified as agricultural holders according to the pre-requisite conditions for operating a minimum cropping area of

0.02 ha and/or raising at least 2 large livestock and/or 3 head of small livestock and/or a minimum of 10 poultry.

These 141.1 thousand agriculture households, also known as agriculture household holdings, collectively operated 214.5 thousand parcels and 216.2 thousand hectares of land. From these households, the TLAC collected basic information on household characteristics, the nature of their holdings and their agricultural activities. In addition, the TLAC2019 sampled a subset of the holdings to measure parcel and plot areas using GPS devices under a Circular Systematic Sampling (CSS) methodology.

The census covered all households and agricultural holdings in Timor-Leste using three census questionnaire forms. Form 1 listed all households, institutional farms such as corporations (company), religious /non-profit institutions (e.g. church, trust), cooperatives/community farms (group activity), and government institutions engaged in farming. Form 2 (Household/Institutional Questionnaire) collected detailed data on agricultural farm households and their farm activities from both household and non-household farms. Moreover, Form 2 also canvassed households engaged in fishing and/or aquaculture activities during the last 12 months prior to the day of enumeration, even if the household neither cultivated land nor raised/kept any livestock during this period. Form 3 collected data on the different physical attributes of the suco (village), such as topography, type of soil and natural disasters, as well as available local infrastructure, such as schools, hospitals, transportation, agricultural machineries, and economic activities.

Once households were identified as qualifying for inclusion in the census as agricultural households, enumerators collected details of agricultural activities carried out during the last 12 months preceding the day of enumeration.

CENSUS SCOPE

The TLAC 2019 utilized three questionnaires for the census in both the household and institutional sectors. The questionnaires are available at Annex 3. The scope of each questionnaire was as follows:

Form 1 – Listing Form: Collected information on the location and involvement of households and institutions in agriculture or aquaculture activities. This form was used to identify households/institutions qualifying for inclusion in the census by operating land used for agricultural purposes, and meeting the minimum size thresholds (0.02 ha of agriculture land, or raising at least 2 large livestock or 3 small livestock or 10 poultry).

Form 2 – Detail Information on the Agricultural Holding: Collected information on the location, the respondent and the agricultural holding. Information included: the legal status of the agricultural holding; basic characteristics of the holding such as size, number of parcels, location, actual area, main land use, and land tenure of each parcel; use of irrigation/fertilizer/pesticides; temporary crops planted, permanent crops planted, agricultural practices, livestock and poultry raised, and fishing/aquaculture activities; implements/equipment and machinery used; hired labour; and the landholder's household information in the case of household holdings.

Information on the agricultural household included total size, names, relation to household head, sex, age, marital status, highest level of education completed, status of employment and tasks undertaken in the agricultural holding in the previous 12 months.

Form 3 – Suco Questionnaire: Collected information on soil types, main topographical features, incidence of calamity or disaster, presence of agro-processing equipment, machinery and facilities, mode of transport, availability of schools, communication facilities, health facilities, water facilities, access to roads and presence of markets, presence of people's organizations.

All households in the country were interviewed using Form 1 to determine their involvement in agricultural holdings. Where a household was found to be involved in agricultural activities and qualified for inclusion, according to the definition of an agricultural holding, the household was further interviewed using Form 2. Detailed data in respect of agricultural holdings were collected subsequently. Actual area of parcels and plots of holdings were measured for a sample of 20% of agricultural households, which were selected using circular systematic sampling methods.

The data in Form-3 was collected directly from the Suco head, and will be analyzed and published separately.

GEOGRAPHICAL COVERAGE

All households in the country including its rural and urban areas were covered in the TLAC 2019, along with the non-household institutional farms operated by a corporation (company), religious or non-profit organization (e.g. church, trust), cooperative/community (group activity), or government.

REFERENCE PERIOD

The 12-month period prior to enumeration day, which fell during 12 August 2019 to 12 Oct 2019, was generally used as the reference period for Form 1 and Form 2. However, the reference period for some items was different from this 12month duration, and is thus indicated separately for data items in each questionnaire. One example is the ownership of livestock, which was taken as of the day of enumeration.

FRAME

The list of enumeration areas (EAs) and information contained in the Population and Housing Census (PHC) 2015 was updated during the intervening period of PHC 2015 and TLAC data collection, and used as frame in the household sector. An EA (Enumeration Area) was an area defined for the census, delimited by natural or artificial boundaries (river, seaside, road, etc.). In an EA, nearly 90 households on an average are located. All the EA are classified according to an EA-ID of 9 digits as: first 2-digit for municipality followed by next 2-digit for sub-municipality, next 2-digit for suco (village), 2-digit for EA and 1-digit for sector (rural/urban).

All households in the EAs were listed in Form 1 to collect some relevant information for identification of farm households. Moreover, another list of corporations (company), religious/non-profit institutions, cooperatives/community and government institutions was prepared within the EAs and all those engaged in farming activity during the last 12 months prior to conduct of census was completely enumerated.

SURVEY PROCEDURE

All data in the TLAC 2019 were collected in de facto method by a group of trained enumerators and supervisors directly interviewing eligible members of farming households.

The respondents were any adult family member (18 years or older) of the household and knowledgeable of the agricultural holding's activities. The most qualified respondent was the agriculture holder. However, in his or her absence, the spouse or any son or daughter 18 years or older, could also act as the respondent. No

household member below 18 years or neighbour or other household was interviewed or asked for the information on the household being surveyed.

Data in the census were collected using CAPI which was developed based on standardized structured questionnaires guided by the *Instruction Manual for Field Staff*, which provided detailed concepts, definitions and procedures to be followed for collection of each item. The software for CAPI application was developed using CSPro. The draft questionnaires and instructions manual were prepared on the basis of recommendations from the Census Technical Committee and User-Producers Groups. The census questionnaires and enumeration manuals were revised and finalized based on the results of a pilot census and experiences gained during that exercise. The *Instruction Manual for Field Staff* was supplemented by a set of checks on the consistency of data incorporated in the CAPI application, and in the subsequent data validation processes.

ROLE OF THE SECRETARIAT

The members of Secretariat were nominated from both, MAF and MF based on the government's resolution. The Secretariat had very important role in facilitating and organizing the process since pilot till the implementation of census. It provided assistance to the members of commission, all units, and also enumerators to ensure the implementation of agriculture census.

ADVOCACY PLAN

Before fieldwork commenced, a thorough advocacy plan was launched to gain the support and cooperation of all households and non-households engaged in agricultural activities in the country. Suco (village) leaders were enlisted to provide information locally and an awareness campaign was undertaken in the mass media, including broadcasts on television and radio, the use of printed banners, posters and stickers on bags, T-shirts and caps used during the census, and social media. Leaflets and pamphlets were also prepared with explanations to such questions as: What is the Census of Agriculture in Timor-Leste? What agency is responsible for the conduct of TLAC? How essential is the TLAC 2019?

SAMPLE DESIGN FOR AREA MEASUREMENT

Considering the prevailing practices and limited knowledge of farmers about the precise area of their holding and its parcels, it was decided to measure parcels of land more precisely for a sample of households using GPS devices. Field trials indicated that GPS-based area measurement of area of parcels and plots took half a day per household, and thus, only 20 households per enumeration area (EA) would be sampled for area measurement in a ten-day period of data collection. A sampling rate of 20% was applied in each EA systematically selecting one agricultural household in every five. This resulted in a sample of about 45,000 household agricultural holdings uniformly spread over the whole territory. However, these results are not provided here, and a separate report will undertake the estimates and analysis of area of holdings and parcels based on the sample survey.

FIELD OPERATIONS

Timor-Leste is divided into 13 municipalities. These municipalities are further sub-divided into 65 sub-municipality (post-administrative) areas, which divide into 452 Sucos (Villages) and 2,352 EAs. There has been no change in these administrative units since the 2015 PHC.

FIELD PERSONNEL

The Census is usually the biggest administrative exercise in the country as detailed information in respect of each parcel of land of the agricultural households is collected in census. A large number of persons was required in the areas of data collection and data processing. Considering around 10% are reserved for contingent situations, this resulted in about 1,293 enumerators, 646 GPS takers, and 646 supervisors recruited to cover the household interviewing operations. These 1,939 enumerators and GPS takers were supervised by the team supervisors, making 588 teams consisting of 2 enumerators and 1 GPS taker per team supervisor. All municipalities were divided into sub-municipality area, and then sucos and EAs, as in the last 2015 population census, and all households within EAs were interviewed. On an average, each team covered the enumeration of four EAs in eight weeks including journey time. Each team, as far as possible, was allotted with 4 contiguous EAs to reduce travel time between EAs.

RECRUITMENT

Recruitment was done in two stages. Coordinators and supervisors were recruited from GDS/MAF staff, while the enumerators and GPS takers were hired in selected sucos/EA.

COORDINATORS

They were the officers from GDS/MAF and the collaborating institutions represented in the Census Technical Committee, and having good understanding of the census process and instruments since their feedback was to help greatly in evaluation and improvement of census process. GDS/MAF/Census Office decided who the best qualified persons for the assignment were. They were involved in recruitment and training of enumeration personnel.

IT PERSONNEL

Apart from these coordinators from GDS/MAF, some core GDS officials was trained specially to handle IT problems that might arise in the use of CAPI device in the field. They were stationed in each municipality headquarter to oversee the problems in their respective areas. Their contact details (phone number and e-mail address) were made available to all supervisors/enumerators/GPS takers in their respective jurisdiction.

SUPERVISORS

They had experience of imparting training and good management skills. Supervisors were selected from GDS/MAF middle level staff.

ENUMERATORS

Enumerators were required to have completed at least secondary school grade or its equivalent with good grades, and come from the suco/ES where they were to work. Preference was given to the sub-set of this group that also had experience using computers or Android phones. Experience in past census/surveys was an added advantage. In areas where qualified persons could not be identified within an suco/EA then recruitment was done from neighboring sucos. The strategy of recruiting personnel from within the selected suco/EAs made the main work relatively easy as they were expected to be already aware about the area and common agricultural practices of local people.

GPS TAKERS

The GPS takers, like the enumerators, were recruited from the suco/EA where they were to work. They were required to have completed at least secondary school or its equivalent with good grades. Practical knowledge of working with GPS was deemed an advantage.

TRAINING OF STAFF

Training was done in three stages. In the first stage, a training of trainers (TOT) was conducted for the census instruments, namely, the census questionnaires, instructions manual and field work protocol. This was followed by the training on the use of the digitized questionnaires and tablets using computer assisted personal interviewing (CAPI) with a field trial. One of the main purposes of this training was to harmonize concepts, procedures and issues so that it issues were identified and resolved and training was conducted uniformly in subsequent stages.

The trainers were selected from the GDS, MAF and other line ministries with preference given to those with experience in conducting census and surveys. These trainers provided a six-day training for the coordinators and supervisors at the municipality level in the second stage. The TOT was facilitated by a core group who were well trained and experienced during the conduct of pilot census.

The third stage training was for enumerators, GPS takers and team supervisors at the sub-municipality level. In the third stage, training was also for six days and comprised of class lectures through power point presentations, mock interviews, group discussions and field practices using the tablets and CAPI. In the training, emphasis was on the understanding of various concepts and procedures, EA maps, enumeration procedures, procedures of CAPI use, use of various codes given in the questionnaire, how to conduct good interviews, and ways of dealing with non-response.

DATA CAPTURE AND PROCESSING

Questionnaire data were collected in tablets using CAPI while GPS devices were used to measure a sample of parcel and plots areas. Paper questionnaires were prepared and used in exceptional circumstances, with the data later transferred in the CAPI application at the municipality level.

The data collected in CAPI was transferred directly from the field to GDS after completion of work of each EA. In the process, a report was generated to enable the Census Office to monitor the progress and coverage of data collection in respect of each EA/suco/sub-municipality/municipality. Data processing was conducted using the CSPro software and STATA.

Data was cleaned, validated and processed, and tables generated according to a pre-decoded tabulation plan. Edit specifications and the tabulation plan were developed based on the experience of the pilot census data collection and processing.

CHAPTER TWO: AGRICULTURAL HOLDINGS AND LAND TENURE

The TLAC defines an agricultural holding as an economic unit under single management with at least one of the following characteristics: a minimum of 200 square metres (0.02 ha) of land used wholly or partly for agricultural production; a minimum of two large livestock; a minimum of three small livestock; or a minimum of 10 poultry. Thus, an agricultural holding can be comprised of crops only, livestock only, or poultry only. Alternatively, it can be a holding with a combination of crops, large or small livestock, or poultry. Two broad types of agricultural holdings were identified in Timor-Leste: household agricultural holdings and institutional agricultural holdings. Institutional holdings are agricultural entities managed and operated by a corporation (company), a religious institution/non-profit institution (e.g. church, trust), cooperative/community (group activity), or a government institution engaged in farming. As such, institutional holdings are considered to be in the non-household sector.

HOUSEHOLD AGRICULTURAL HOLDINGS

A household agricultural holding is known as an agricultural household, and its primary residence is known as a homestead. The activities of an agricultural household in Timor-Leste are carried out: a) in a homestead parcel only; b) on land separated from the homestead; or c) within the homestead as well as on separate land.

About 213.42 thousand households accounting for 1.21 million people were listed in the agriculture census. About 141.41 thousand households (66%) met the TLAC definition of an agricultural household, and agricultural land covered a total area of 216 180 hectares. About 3632 households (1.7%) were engaged only in fishing. That is, they neither grew any crop or plant nor they raised any livestock; but they were engaged in fishery activities for at least for 15 days during the last 12 months and had at least one fishing material, such as vessel, net, string, etc. Likewise, 2069 (close to 1%) households had a pond/culvert/tank of at least 25 square meters and engaged only in aquaculture for at least 15 days during the last 12 months prior to the day of enumeration. While the average size (number of persons living) of a household in Timor-Leste was estimated at 5.7, that of an agricultural household was marginally lower at 5.4.

In addition, 2514 institutions were listed in the census with 597 reporting that they carried out agricultural activities, with a total estimated area used for agriculture of 3070 ha. Of them, 26 farm holdings were corporations/companies, 273 were cooperatives, 163 were government institutions and 171 were religious or other non-profit institutions.

Hence, the number of agricultural holdings (household and institutional) in the country was reported at 141 738, with a total area of 219 250 ha. (see Table 2.1 below).

Table 2.1 Number of household and institutional agricultural holdings and area (ha.): Timor-Leste

Data Items	Number	Area (in hectare)
Total household agricultural holdings	141 141	216 180
Total institutional agricultural holdings	597	3070
Total agricultural holdings	141738	219 250

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

HOUSEHOLD AGRICULTURE HOLDING AND TYPE

Of the total 141 141 household agricultural holdings, around 98 percent (137 554) were individual holdings, and merely 2 percent (3043) were joint holdings (as shown in Figs. 2.1 & 2.2) that were operated by two or more holders from the same households or from different households. About 15 percent (21 818) of holders were female and the remaining 85 percent (119 323) holders were male.

Fig. 2.1: Number of household agricultural holdings enumerated by type of holding: Timor-Leste

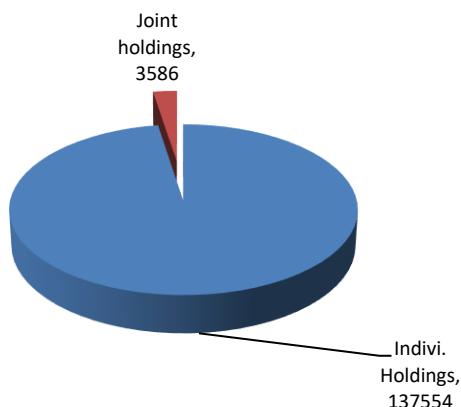

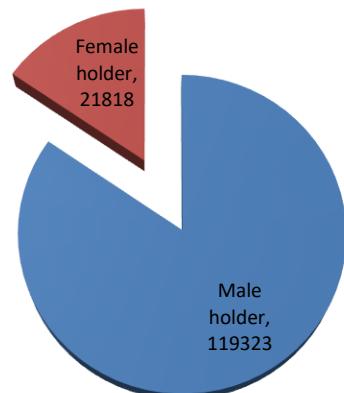

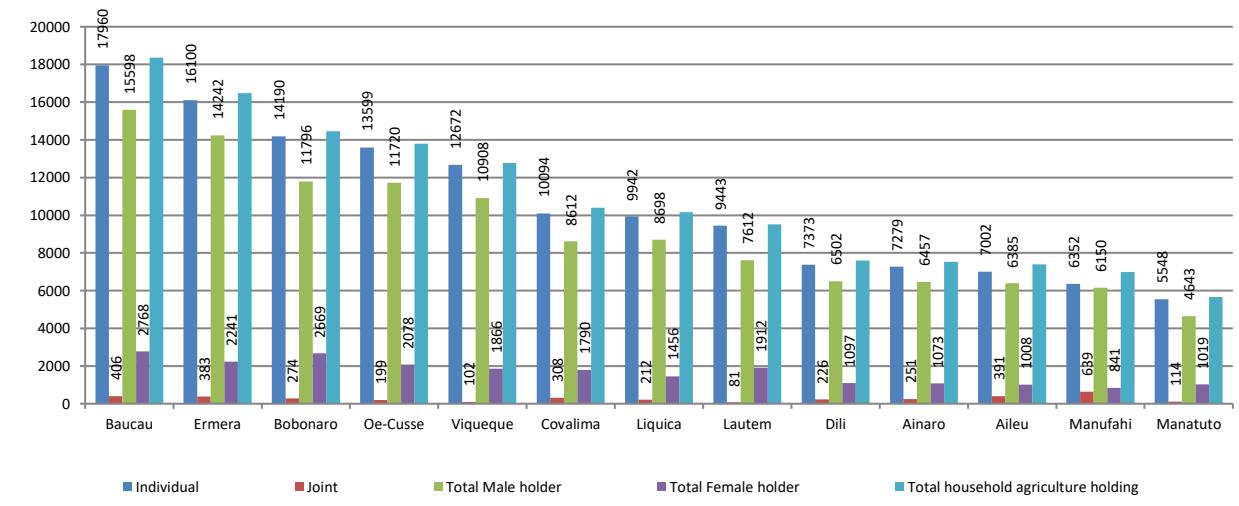

Fig. 2.2: Number of household agricultural holdings enumerated sex of holder: Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Fig. 2.3M: Number of household agricultural holdings enumerated by type of holding and Municipality

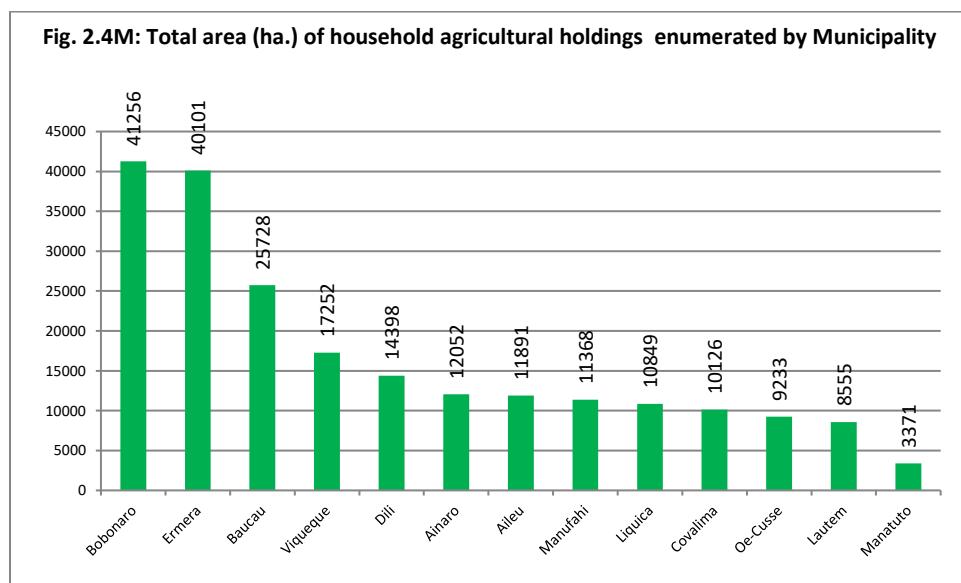

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Baucau reported the largest number of household agriculture holdings with 17 960 while Manatuto, the smallest municipality, had 5 548, nearly one-third the number of holdings as Baucau. Next in the order of largest to smallest municipalities were Ermera with 16 100 holdings, Bobonaro with 14 190 holdings, Oe-cusse with 13 599 holdings, and Viqueque with 12 672 holdings.

The largest number of joint household agriculture holdings was reported in Manufahi (639), followed by Baucau (406) and Ermera (383). Differentials in the number of male and female holders, noticed at the country level, are also revealed across the municipalities. [Ref. Fig. 2.3M]

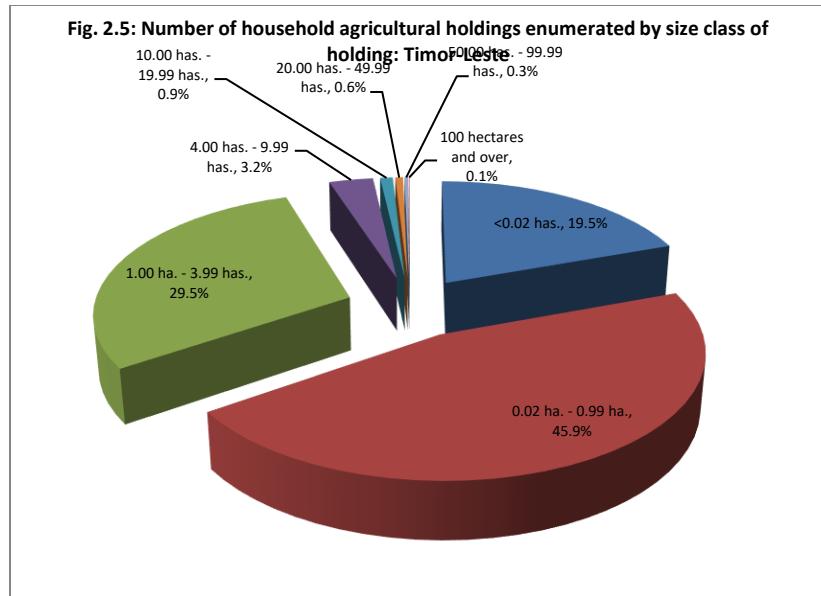

Contrasting with the highest number of household holdings in Baucau, Bobonaro reported the largest agricultural area of the country accounting for 41 256 ha. (19.1 percent). The second largest municipality in terms of area was Ermera with 40 101 ha. (18.5 percent), followed by Baucau with 25 728 ha. (11.9 percent). The smallest municipality was Manatuto with 3 371 ha. or 1.6 percent of total agricultural land. [Ref. Fig. 2.4M]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

NUMBER AND SIZE OF AGRICULTURAL HOLDINGS

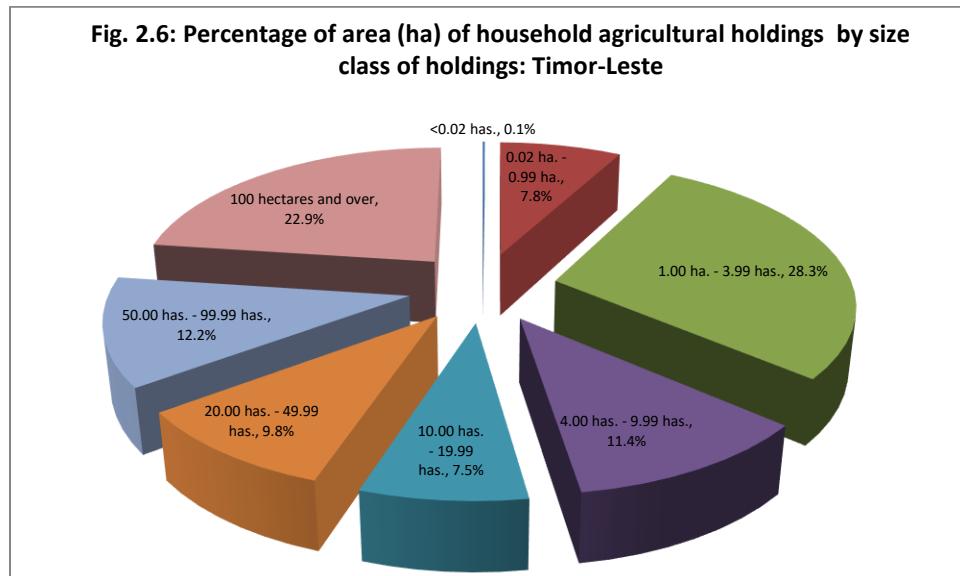

Of the 141 141 household agricultural holdings, around 66 percent had land measuring less than 1 ha in size, with a total share of only 8 percent of the total agricultural area of the country (see Figs. 2.5 and 2.6). A further 30 percent of agricultural holdings were between 1 ha and 3.99 ha. and accounted for around 36 percent of all agricultural land area. Thus, 95 percent of Timor-Leste household agricultural holdings accounted for only 48 percent of the total agricultural area. On the other hand, nearly 2 percent of household agricultural holdings of size 10 ha or more operated 52 percent of all agricultural land as shown in Fig. 2.6.

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

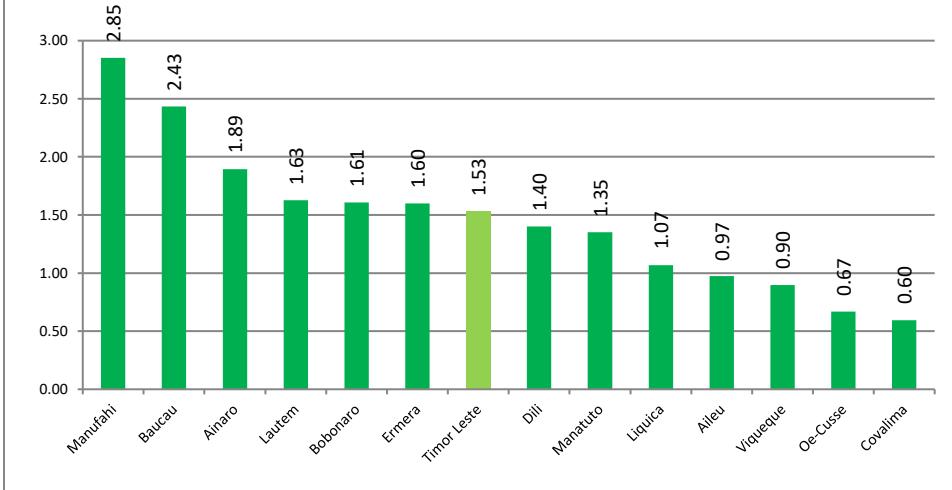

AREA AND SIZE OF HOUSEHOLD AGRICULTURAL HOLDING

The average size of the agricultural lands utilized by each household agricultural holding was reported at 1.53 hectare. While this average area was 1.55 ha. for a holding operated by male holder, it was marginally lower (1.43 ha.) for a holding operated by female holder.

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Fig. 2.7M: Average area (ha.) of household agriculture holding by municipality

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

The area of a household agricultural holding on average was higher than the national average in Manufahi (2.85 ha), Baucau (2.43 ha.), Ainaro (1.83 ha), Lautem (1.63 ha.), Bobonaro (1.61 ha) and Ermera (1.60 ha). Seven municipalities reported average size of household agricultural holdings lower than the national average. The average size of household agricultural holdings in these seven municipalities ranged from 1.40 ha in Dili to 0.60 ha in Covalima.

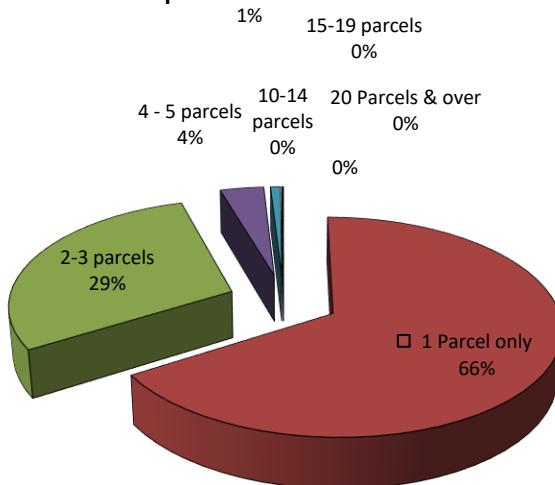

The average holding size was around 44 ha. for those holdings falling in the size class 10 ha or more, and it was around 156 ha. for holdings falling in the size class 50 ha. or more, meaning that those with larger holdings had, on average, very large holdings. [Ref. Figs. 2.7M]

PARTITIONING OF HOUSEHOLD AGRICULTURAL HOLDINGS INTO PARCELS

Agricultural holdings in Timor-Leste are generally composed of a number of partitioned pieces of land referred to as ‘parcels’. These parcels are defined as any piece of land under one land tenure type, (i.e. the right to use the land for agricultural purposes) which is entirely surrounded by other features not forming part of the holding, such as other land, water, roads, and forest. Such parcels may consist of one or more fields or plots adjacent to each other.

While the 141 141 thousand agricultural households contained a total of 214 469 parcels of land, as high as 95 percent of household agricultural holdings in Timor-Leste were composed of between one and three parcels of land. Sixty six percent of household agricultural holdings were composed of only 1 parcel. About 65 percent of male holders and 73 percent of female holders operated holdings with single parcels. [Ref. Fig. 2.8]

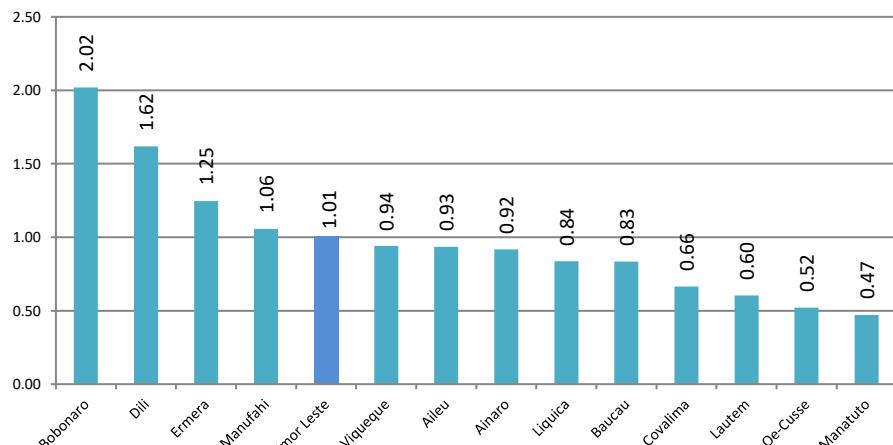

Fig. 2.8: Percentage of household agricultural holdings by group of parcels in Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

The national average size of a parcel of land was 1.01 ha. The parcel size of male operated parcels was slightly lower at 1.01 ha. than that of a female operated parcels of 1.02 ha.

Fig. 2.9: Average area (ha.) of parcel of household agriculture holding by municipality

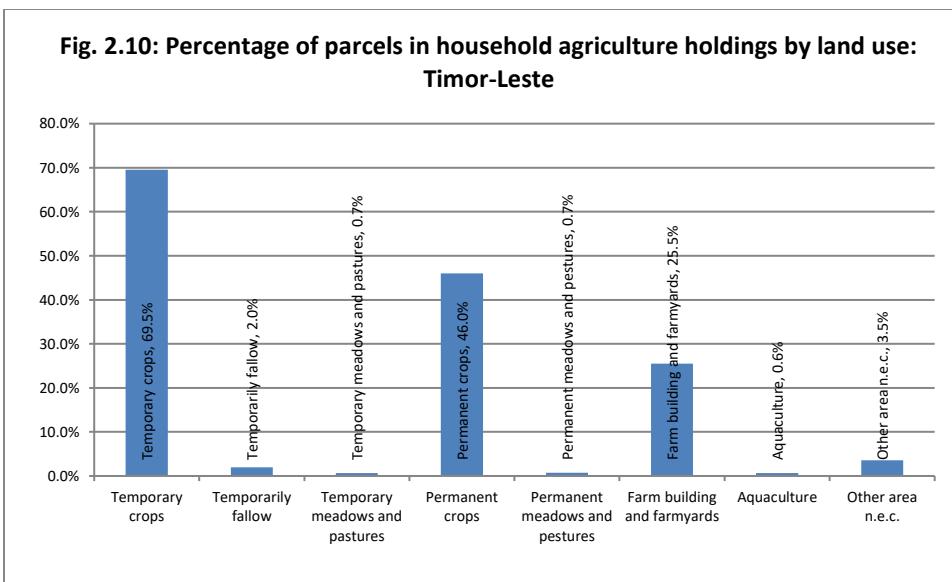

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Four municipalities reported higher average parcel areas than the national average: Bobonaro (2.02 ha.), Dili (1.62 ha.), Ermera (1.25 ha.) and Manufahi (1.06 ha.). The other nine municipalities trailing the national average were Viqueque (0.94 ha.), Aileu (0.93 ha.), Ainaro (0.92 ha.), and others ending with Manufahi (0.47 ha.). [Ref. Fig. 2.9M]

LAND USE OF PARCELS

A parcel of land can be used solely for one purpose or for two or more purposes, such as, for temporary crops as well as for permanent crops and plants, etc. Seven of every 10 parcels (149 149 parcels) within household agricultural holdings were used for the cultivation of temporary crops (with a growing cycle of less than one year), with relatively smaller percentages of parcels (98 666 parcels: 45 percent) allocated for permanent crops (growing longer than one year), and the rest for other purposes. In addition, crops were also grown within the homestead parcels (54 747 parcels: 26 percent), and in combination with other agricultural activities, such as keeping livestock and/or poultry.

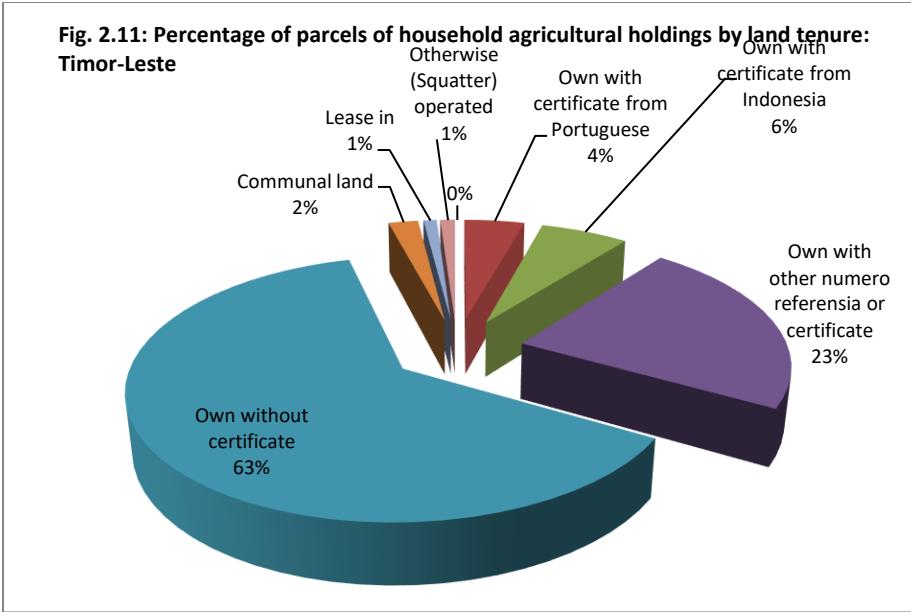

A very small percentage of parcels were left idle in the country during the five years prior to the census. Likewise, a very small percentage of parcels were used in undertaking other agricultural activities, such as cultivating temporary meadows, raising livestock and poultry, etc. [Ref. Fig. 2.10]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

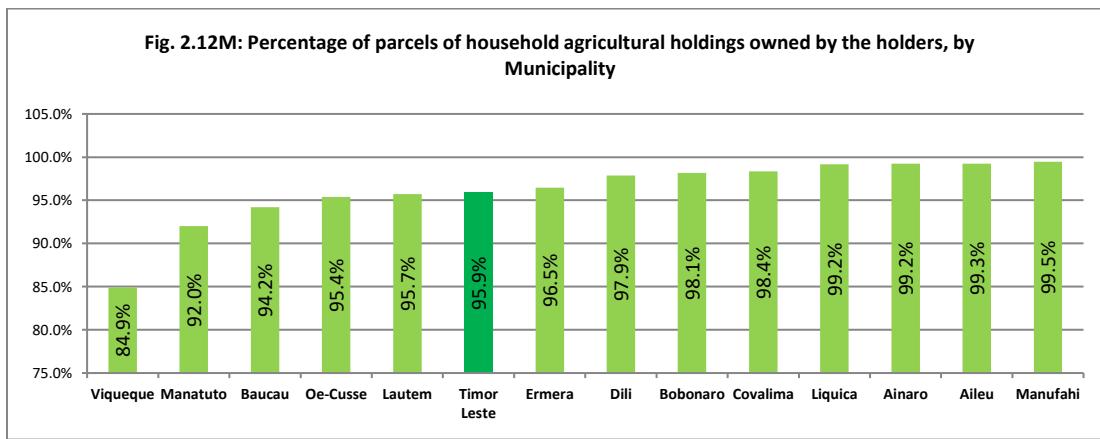

LAND TENURE OF PARCELS

Agricultural households owned 96 percent of the parcels of land in their holdings, that is, parcels owned by households were either owned with a certificate from the Portuguese, or from Indonesia, or with other *numero referensia* or certificate, or owned without certificate. About 2 percent of the parcels of land were communal land and nearly 1 percent was leased-in in their holdings. Pattern of land tenure status was almost the same for the holdings operated by male and female holders. [Ref. Fig. 2.11]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

The percentage of owned parcels (with or without certificate) exceeded the national level in eight municipalities. Of them, four municipalities reported to own over 99 percent of parcels, and almost all households in Manufahi. Around 85 percent of parcels were owned by agriculture households in Viqueque, the lowest among all municipalities. In Viqueque, on the other hand, around 8 percent of land parcels were reported to be leased in – the highest among all municipalities. The other municipalities that reported lower percentage of owned parcels than the national level were Manatuto, Baucau, Oe-Cusse and Lautem. [Ref. Fig. 2.12M]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

INSTITUTIONAL FARM HOLDINGS

The distribution of number of institutional farm holdings and its area (ha.) by size class is shown in Fig. 2.13. The average area of a farm institution was around 5.14 ha. and ranged from 0.58 ha. in the size class of less than 4 ha. to 245 ha. in the size class 100 ha. or more. The number of such large farm institutions

was only 8 in Timor-Leste – mostly in Ailue (3) and Manufahi (3). The expected trend in the number of farm holdings and area is revealed over the size class. As the size class of farm holding increases, the area of farm holding increases, and the number of farm holdings in the region decreases. While 62 percent of farm institutions with land less than 1 ha. operated only 2 percent of the total agricultural land area, about 2 percent of farm institutions with land 50 ha. or more accounted for 71 percent of total institutional farm area of 3070 ha. The number of institutional farm holdings and area by size class are given separately for each municipality in Table 2.2M and 2.3M. [Fig. 2.13]

CHAPTER THREE: CROP CULTIVATION

The primary activities undertaken by household agricultural holdings in Timor-Leste were the planting of temporary and permanent crops, and associated activities of irrigation, fertilizer use, use of plant protection practices, and receiving/accessing agricultural information. Temporary crops are those with a growing cycle of less than one year, and after harvest, the land is either re-sown or replanted for another production cycle. Temporary crops presented in the census were those grown seasonally during the reference period of the last 12 months prior to the day of census enumeration.

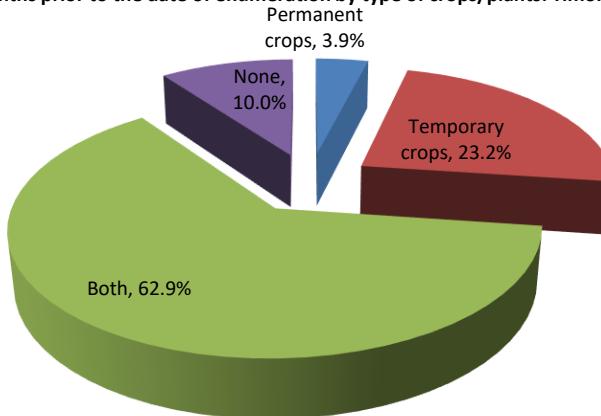

Permanent crops were those with more than one year growing cycles and found to be still standing and productive within agricultural holdings. There are various permanent crops, including cultivated fruits, edible nuts, oil crops, rubber, spices and aromatic crops, and other non-food crops.

Crops in both categories were presented in terms of area planted, irrigation, fertilizer use and plant protection practice. Area planted refers to the amount of land used for agricultural operations, calculated as planting area times the number of times the same crop or different crops were planted during the reference period. This area is termed as ‘gross’ area planted, and can exceed actual agricultural land area.

CROPS GROWN

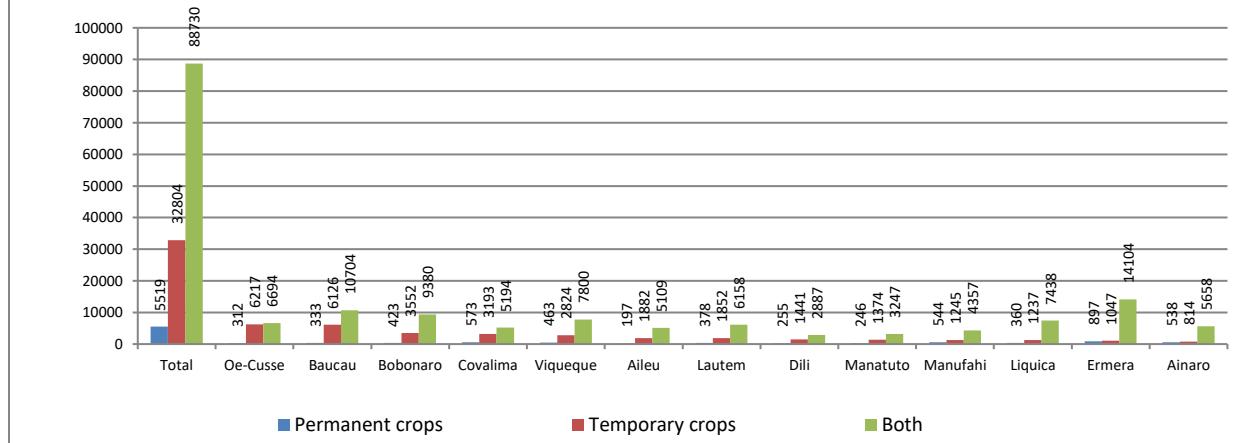

Of the total number of 141 141 household agriculture holdings in the country, 127 051 holdings cultivated crops and plants in their land parcels, accounting for 90 percent of household agriculture holdings. Among the household agriculture holdings that reported cultivation of crops and plants, about 63 percent (88 730) cultivated both temporary as well as permanent crops/plants during the reference period, while 23 percent (32 804 holdings) had grown only temporary crops in their holdings and 4 percent (5 519 holdings) cultivated only permanent crops/plants. Around 10 percent (14 088) of agriculture household holdings did not cultivate any crops or plants but did raise some livestock for their livelihood during the reference period. The picture of cultivation of permanent and temporary crops and plants is shown in Fig. 3.2M. Growing of temporary crops dominated that of permanent crops/plants in terms of number of household holdings in all the municipalities. [Ref. Figs. 3.1 & 3.2M]

Fig. 3.1: Percentage of household agriculture holdings cultivated crops/plants during last 12 months prior to the date of enumeration by type of crops/plants: Timor-Leste

HOUSEHOLD AGRICULTURE HOLDING BY AREA CULTIVATED

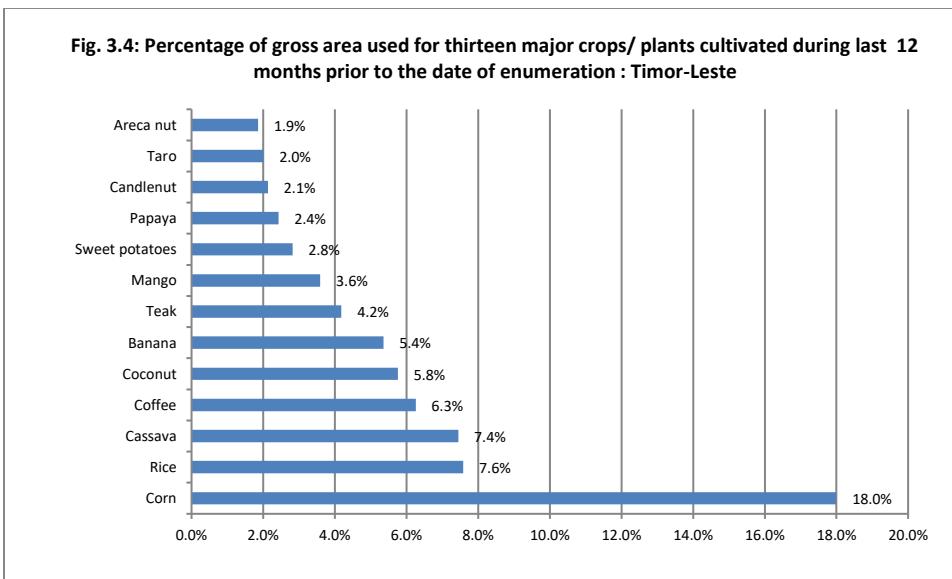

It is evident from Fig. 3.3 that agriculture holdings in the lower size classes cultivated less land area compared to their share of total number of agriculture households. On the other hand, agriculture holdings in the higher size classes, say, 10 ha. or more, cultivated more land area compared to their share of total agriculture households. For example, 63 percent of the smallest agriculture holdings cultivated less than 1 ha. of land, while 5 percent of the largest agriculture holdings cultivated 55 percent of land in the country during the reference period. [Ref. Fig. 3.3]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

CROPS GROWN AND AREA CULTIVATED

The gross agriculture area cultivated in Timor-Leste was about 509 226 ha, or around 2.36 times the total agriculture area of all household agriculture holdings. Seventy-two crops and plants were grown during the reference period of which thirteen major crops accounted for around 70 percent of the total area cropped. This was led by corn (18 percent), rice (7.6 percent), cassava (7.4 percent), coffee (6.3 percent), Coconut (5.8 percent), Banana (5.4 percent), Teak (4.2 percent), Mango (3.6 percent), Sweet potatoes (2.8 percent), Papaya (2.4 percent), Candlenut (2.1 percent), Taro (2.0 percent) and Areca nut (1.9 percent). The remaining 56 crops and plants accounted for 30 percent of the gross cultivated area. [Ref. Fig. 3.4]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

METHOD OF PLANTING

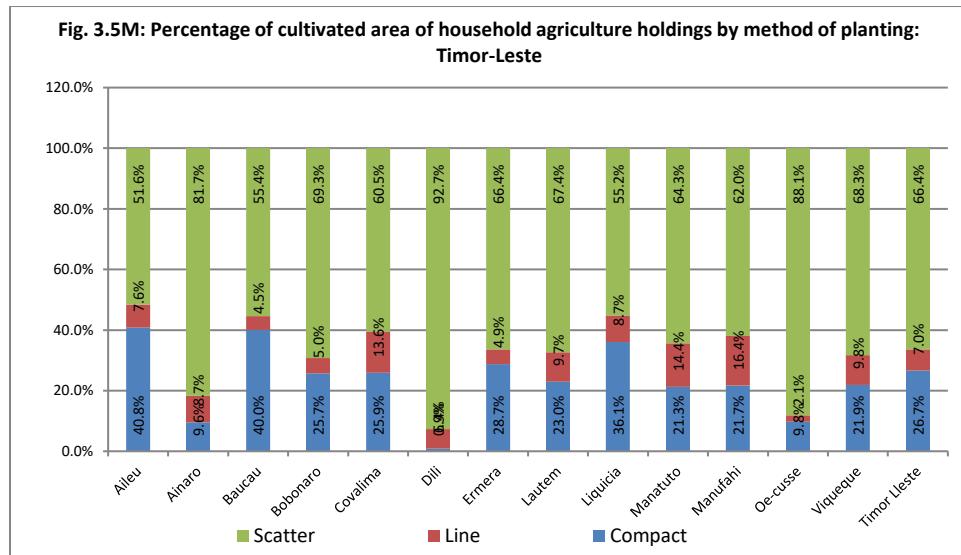

The 72 varieties of cultivated crops and plants were sown in three types of planting methods: scatter, mixed and compact planting, on 509 226 ha of gross area in the country. The total area under scatter planting and cropping was reported at some 337 893.1 ha, accounting for 66.4 percent of the total gross area devoted to crops and plants. The second largest was the compact planting area that accounted for some 135 753.1 ha., or 26.7 percent of the total gross area cultivated. The line cropping area shared 35 580.2 ha. of total cultivated gross area.

Baucau had the largest scatter planting and cropping area of 70 871.5 ha. with Bobonaro in second place with 44 333.0 ha. These two municipality maintained their rank with respect to the area of compact cultivation also, and area reported for this category was 51 197.9 ha. and 16 466.5 ha., respectively. [Ref. Fig. 3.5M]

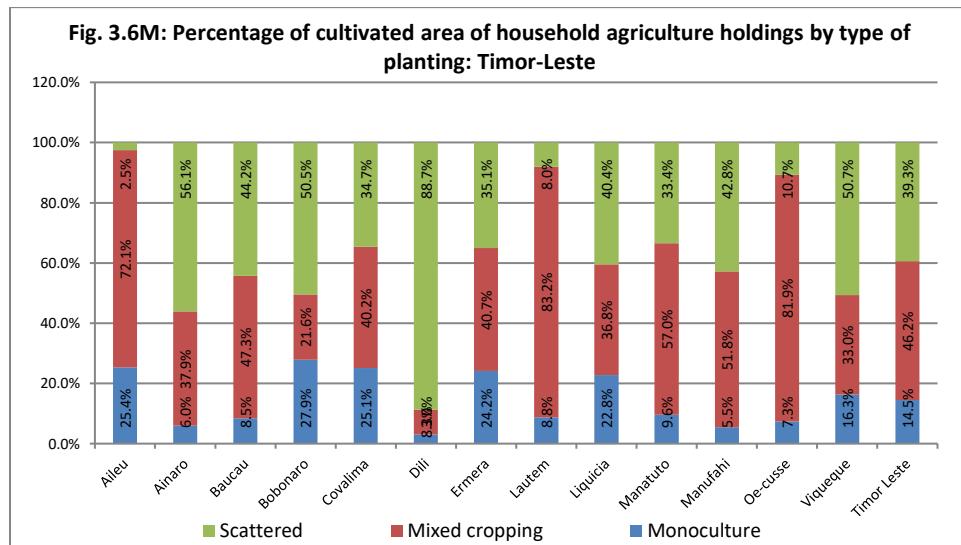

TYPE OF PLANTING

Three types of planting and cropping methods are generally followed: monoculture, mixed cropping and scattered planting and coppicing. In monoculture, a single crop/plant is sown in a parcel of land. Bobonaro had the largest area reporting some 17 872.2 ha. against total cultivated area under monoculture of some 73662.8 ha. in the country. Bobonaro was followed by Ermera with 13 706.4 ha. and Baucau with 10 821.3 ha. Further in the country, 235 210.2 ha. and 200 353.4 ha. of cultivated area were sown with mixed and

scattered pattern, respectively. Among the municipalities, Baucau reported the largest area under mixed cropping and planting with 60459.1 ha., besides scattered planting with 56574.8 ha. of gross area. [Ref. Fig. 3.6M]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

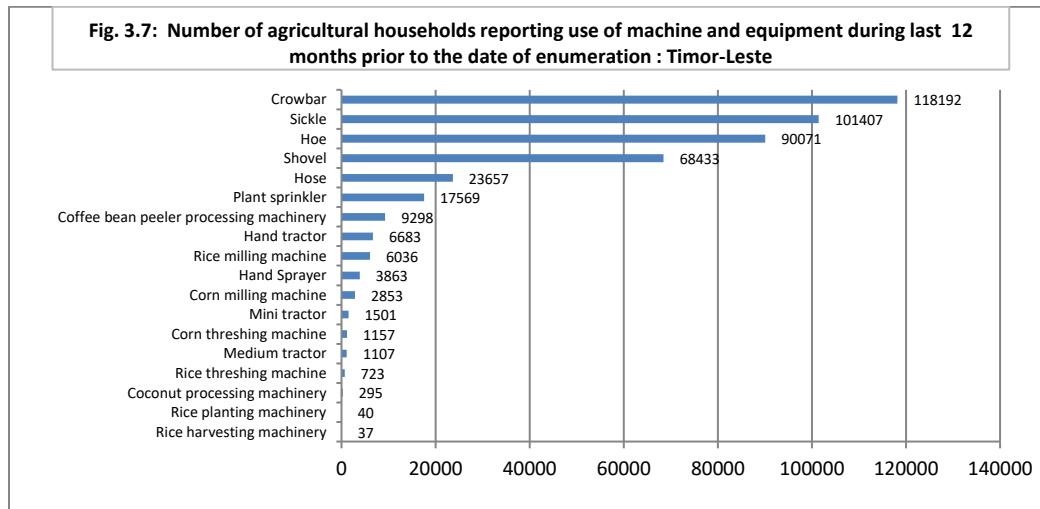

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

EQUIPMENT AND MACHINERY USED

Traditional agricultural equipment was used predominately by Timor-Leste's household agricultural holdings, such as, crowbar, hoe, sickle, shovel, hose, plant sprinkler, coffee bean peeler processing machinery, hand tractor, rice milling machine, hand sprayer, corn milling machine, etc (see Fig. 3.6). The

crowbar was used by 118 192 households, sickles by 101 407 households, hoes by 90 071 households, shovels by 68 433 households, hoses by 23 657 households, plant sprinklers by 17 569 households and coffee bean peeler processing machinery by 9 298 households. Amongst these users of machinery and equipment, agricultural households tended to own a large number of them, yet a large number of agricultural equipment and machinery was also rented by farming households from the private sector. Most crowbars were privately owned as well as rented. Other machinery and equipment like, hoes, hand tractors, rice milling machines, and corn milling machines were mostly rented. A small number of equipment and machinery was made available to agriculture households by the Government. [Ref. Table A.33 in the appendix]. [Ref. Fig. 3.7]

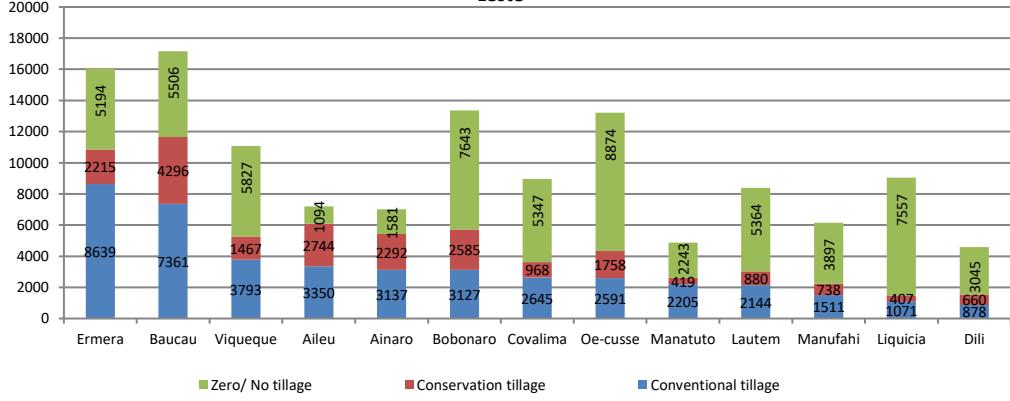

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

TYPE OF TILLAGE PRACTICE USED ON HOLDING

About 51 percent of the holdings (65 846) did not till their land for cultivation in Timor-Leste. Those who tilled their land for cultivation used mainly two types of tillage practices: conventional tillage and conservative tillage. Of those who tilled their land, 67 percent (42 745) used conventional tillage and the remaining 21 567 holdings used conservative tillage.

Among all municipalities, Ermera topped the list with 54 percent of holdings reporting use of conventional tillage, while 33 percent did not till land for cultivation. Next to Ermera, Manatuto reported use of conventional tillage in 45 percent of holdings. On the other hand, Liquica, a small municipality in terms of number of cultivated holdings, did not till for cultivation in 84 percent of holdings. [Fig. 3.8M]

Fig. 3.8M: Percentage of household agriculture holdings cultivated land by type of tillage practice used: Timor-Leste

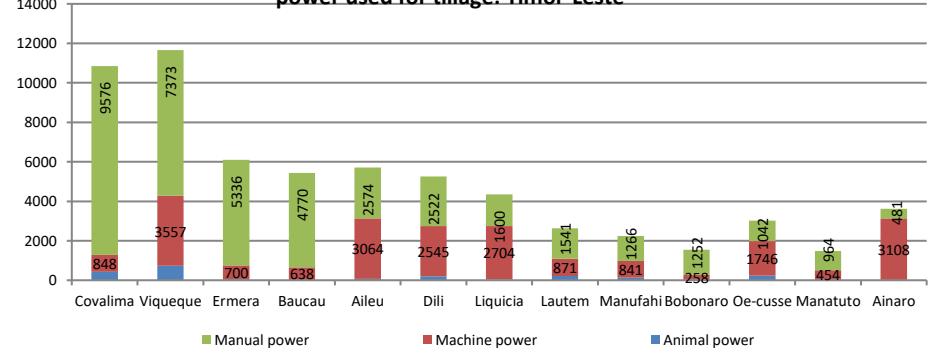

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

SOURCE OF POWER USED FOR TILLAGE

Of the agricultural holdings that reported using some type of land tillage for cultivation, in Timor, 63 percent used manual power, 33 percent used machine power and nearly 4 percent used animal power. Ainaro appears to be the most progressive municipality among all where 86 percent of holdings reported use of machine power for tillage. Other municipalities such as Oe-cusse, Liquica and Aileu fall in that category where more than 50 percent of holdings used machine for tillage of land. [Fig. 3.9M]

Fig. 3.9M: Percentage of household agriculture holdings cultivated land by source of power used for tillage: Timor-Leste

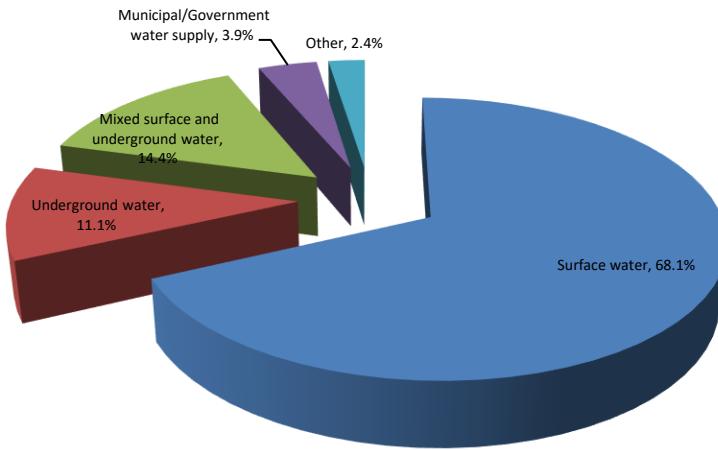

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

USE OF IRRIGATION AND MAIN SOURCE

Use of irrigation for growing of crops and plants was significant in Timor-Leste with 20 percent of agricultural households (28 965) reporting irrigation of land. Around 68 percent of those who irrigated land, reported using surface water as the main source, another 11 percent used underground water and 14 percent used both surface and underground water. The Municipality and Government provided support to 4 percent of agriculture household for irrigating land for cultivation. [Ref. Fig. 3.10]

Fig. 3.10: Percentage of household agriculture holdings reporting irrigation by main source of irrigation water during last 12 months prior to the date of enumeration : Timor-Leste

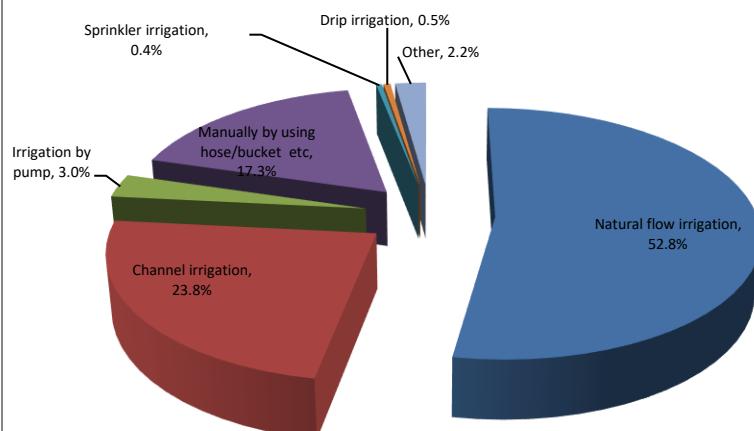

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

IRRIGATION USE AND MAIN METHOD

Agricultural households reported the use of several methods of irrigating water for cultivation, such as natural flow irrigation, channel irrigation, irrigation by pump, manually by using hose/bucket, sprinkler irrigation, etc. Most of the agriculture households (53 percent) reporting irrigation used ‘natural flow irrigation’ methods, followed by channel irrigation (24 percent), manually by using hose/bucket (17 percent) and using piped (3 percent). Sprinkler irrigation and drip irrigation were used by less than 1 percent of agriculture households. [Ref. Fig. 3.11]

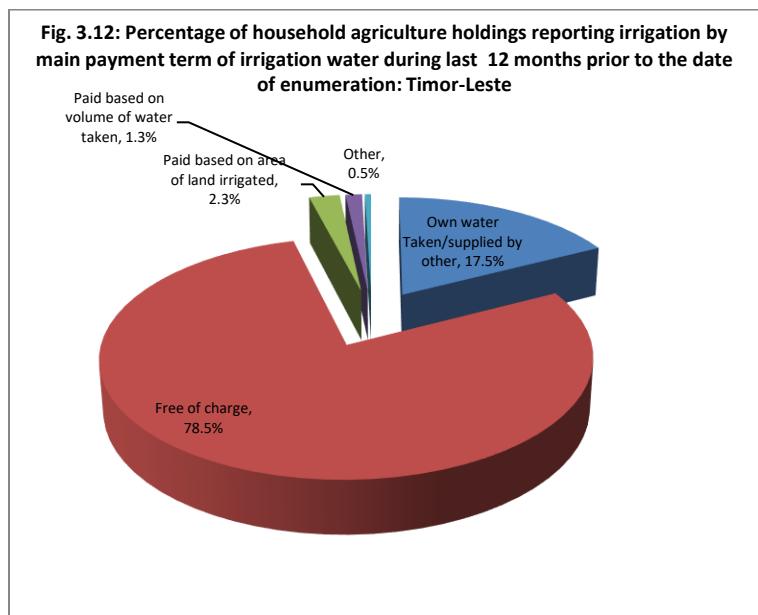

Fig. 3.11: Percentage of household agriculture holdings reporting irrigation by method of irrigation water during last 12 months prior to the date of enumeration: Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

USE OF IRRIGATION AND MAIN PAYMENT METHOD

Seventy nine percent of agriculture households reporting irrigation had irrigated land free of any charge, while another 18 percent used own water taken/supplied by others for irrigation. Only around 4 percent of agriculture households paid for irrigating their land either based on area irrigated or volume of water taken. [Ref. Fig. 3.12]

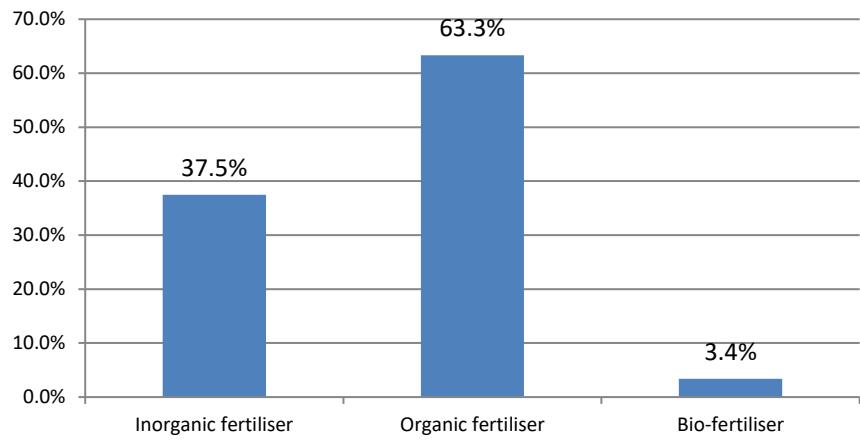

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

FERTILIZER USE

Around 7852 agriculture households (6 percent) reported use of fertilizers for growing crops and plants. Some households used more than one type of fertilizer such as inorganic, organic and bio-fertilizer. The most used fertilizer was organic fertilizer, reported by 63% of the agriculture households among those who reported the use of any fertilizer. Inorganic fertilizer was used by nearly 38 percent of holdings, while only 3 percent used bio-fertilizer. [Ref. Fig. 3.13]

Fig. 3.13: Percentage of agricultural households reporting use of fertilizer by type of fertiliser used during last 12 months prior to the date of enumeration : Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

FERTILIZER USED IN CROPS

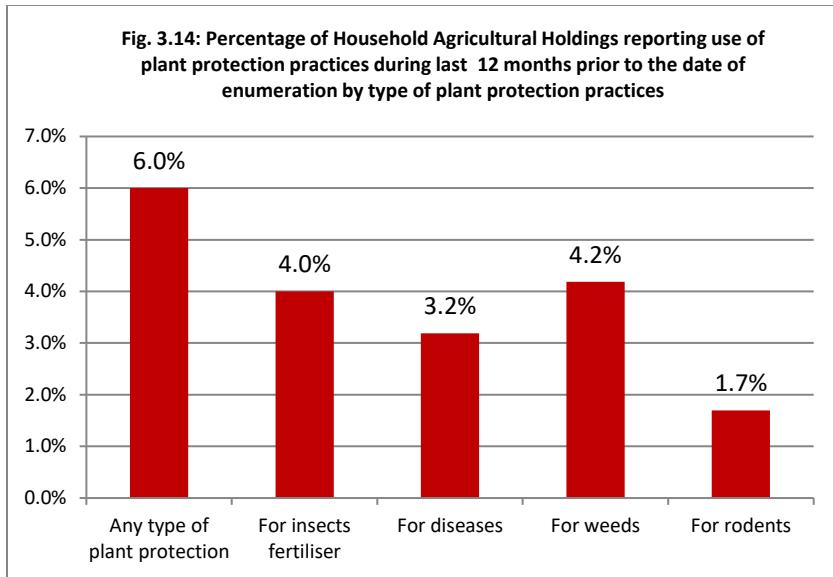

Of the 6 percent of agriculture households that used fertilizers, it was used mostly for temporary crops. For example, fertilizer was used for rice cultivation by the highest number of 2 274 (19 percent) agriculture households. This was followed by mustard by 990 (13 percent), corn by 593 (8 percent), shallots by 420 (5 percent), lettuce by 352 (4 percent), tomato by 346 (4 percent), and orange by 288 (nearly 4 percent).

PLANT PROTECTION PRACTICES

Around 8 538 (6 percent) of all agriculture household holdings reported the use of some type of plant protection for insects, diseases, weeds and rodents. Some households applied more than one type of plant protection. Around 4 percent of agricultural holdings applied each for insects fertilizer (5 644) and for weeds (5 911). Plant protection was applied for diseases by a further 3 percent (4 501) and was lowest for rodents at nearly 2 percent (2 393) of agricultural holdings.

CROPS UNDER PLANT PROTECTION

Fewer agricultural households used plant protection material for a large number of crops and plants grown during the reference period. Of all crops, plant protection material was applied for growing of corn by 1 845 holdings, rice by 1 725 and cassava by 680 holdings in all of Timor-Leste. [Ref. Fig. 3.14]

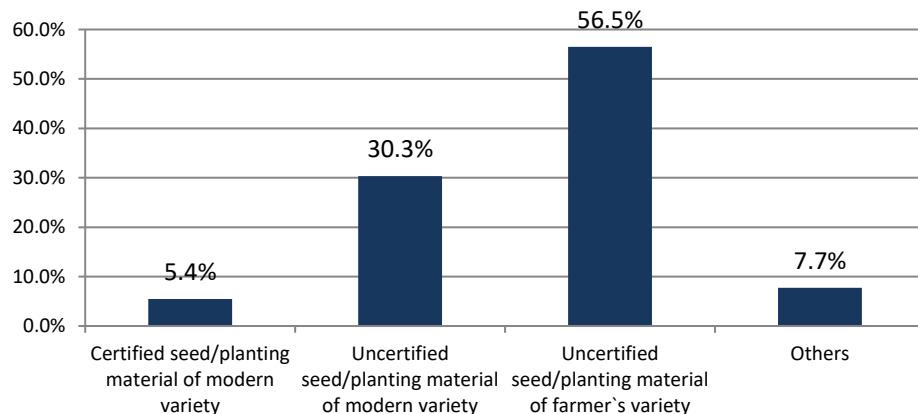

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

USE OF SEED/ PLANTING MATERIAL AND SOURCES

In the entire country, 28 298 agricultural households (20 percent) used both high yielding and local varieties of seed and planting materials. Of them, only 1 540 used certified seed/planting material of a modern variety compared to 8 584 households that used uncertified seed/planting material of a modern variety and 15 990 uncertified seed/planting material of farmers' variety. In general, more agricultural holdings used local varieties of seed/planting materials than certified seed/planting material. The clear majority of household agricultural holdings reporting use of certified seed/planting material, used for corn (725) and rice (315) production. [Ref. Fig. 3.15]

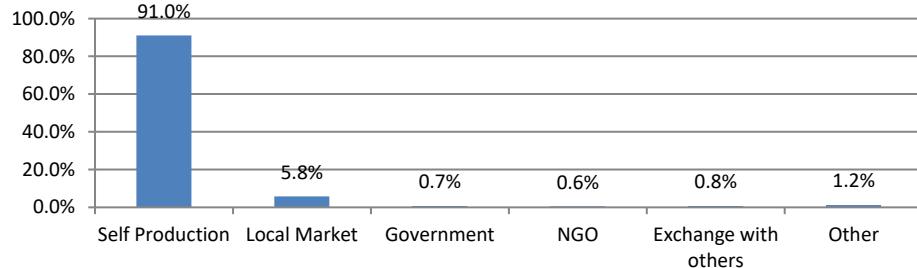

Approximately 91 percent of agricultural holdings reported that self-produced seeds were their source, while 6 percent procured it from local markets and nearly 1 percent from government sources. [Ref. Fig. 3.16]

Fig. 3.15: Percentage of household agricultural holdings used seed/planting material from those used seeds/planting materials by type of seed/planting material used during last 12 months prior to the date of enumeration : Timor-Leste

AGRICULTURAL EXTENSION SERVICES

Eight distinct sources (government, private companies, non-government organizations and local associations) provided information on agricultural extension services to agricultural households in terms of promoting productivity, increasing food security, improving rural livelihoods and promoting agriculture. About 16 433 (12 percent) of the household agriculture holdings received or accessed information on agricultural extension services in the country.

The mass media (television and radio) was the most popular source of agricultural information. The extension services provided by the government, as well as information sharing among farmers themselves were other important sources of information. The Radio, Government and Television each acted as the source for more than 50 percent of agriculture households who reported to receive/access the information. Other sources such as other farmers (46 percent) or NGOs (45 percent) or membership associations (40

percent) also played a significant role in providing information to the agriculture households reporting to receive or access information. Besides, journal/newspaper or internet could each serve as a source for 21 percent of such agriculture households. [Ref. Fig. 3.17]

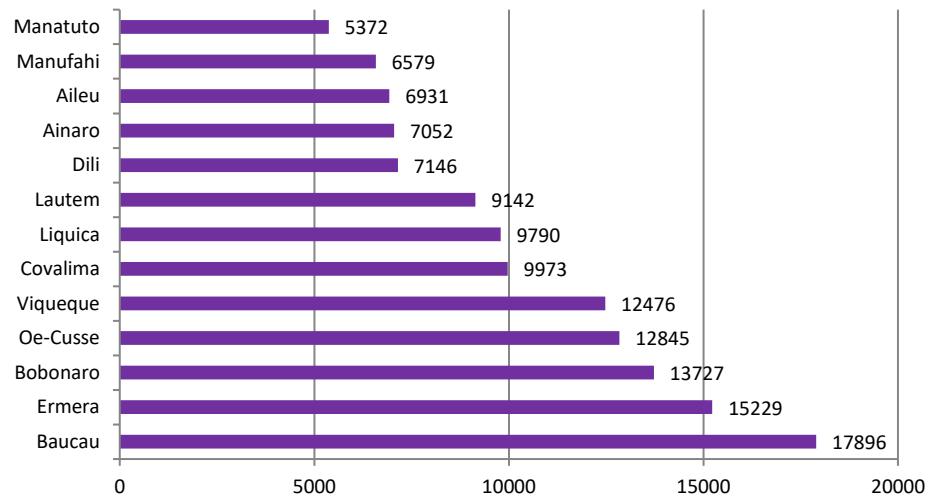

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

CHAPTER FOUR: LIVESTOCK AND POULTRY REARING

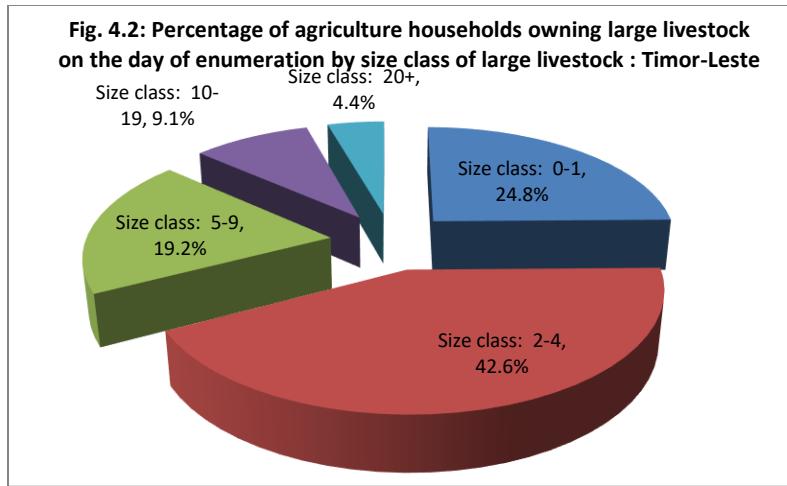

LIVESTOCK AND POULTRY

Livestock and poultry was the second most important agricultural activity undertaken by agricultural households, following crop cultivation, and therefore played a key role in supporting livelihoods of and providing income to agricultural households. Around 95 percent (134 158) of all agricultural households in Timor-Leste raised livestock and/or poultry at the time of the census enumeration. The largest number of households raising livestock and poultry was recorded in Baucau (13.3 percent), followed by Ermera (11.4 percent), Bobonaro (10.2 percent), and Oe-Cusse (9.6 percent). Other municipalities with at least 9000 households reporting the presence of livestock and poultry were Viqueque (12 476 households), Covalima (9 973), Liquica (9 790) and Lautem (9 142). The least number of households reporting the presence of livestock and poultry was in Manatuto (5 372). [Ref. Fig. 4.1]

**Fig. 4.1: Number of Agricultural Households Owning any Livestock
on the day of enumeration by Municipality**

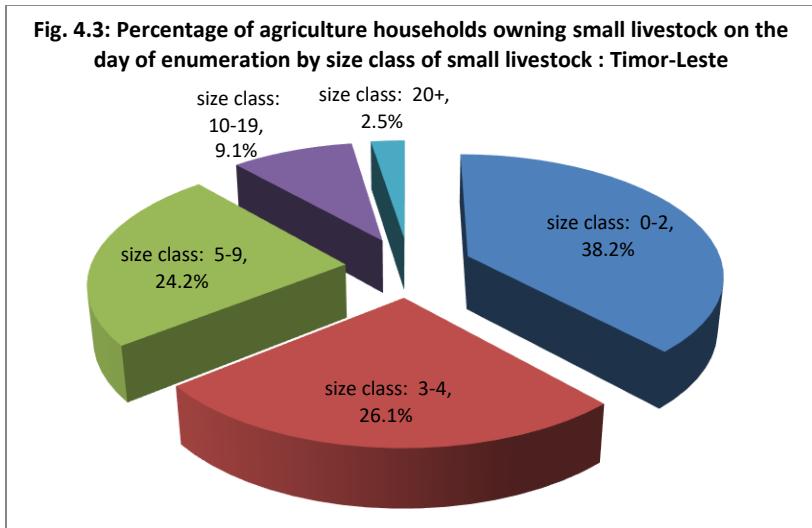

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

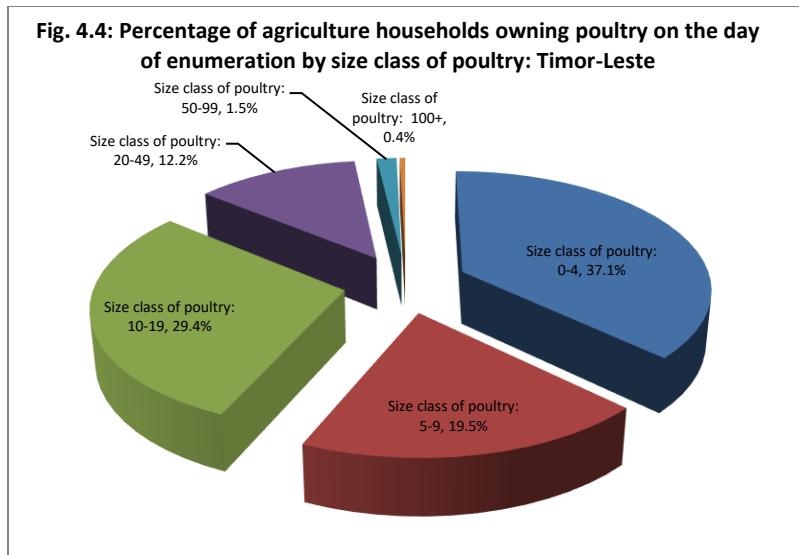

TYPE OF LIVESTOCK /POULTRY BY SIZE CLASS

Among the agriculture households that were raising or keeping livestock, about 92 percent reported raising small livestock, 82 percent reported raising poultry, and 62 percent reported raising large livestock. Preference of households for raising small livestock over large livestock was evident from the results of the census, and many households kept a mix of both livestock and poultry. In the case of households raising small livestock, 88 percent kept between nine or less number of small livestock, such as pigs and goats. About 12 percent of households kept 10 or more small livestock. The largest number of households (153 949) raised either pigs or goats, or both. [Ref. Fig. 4.3]

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Similarly, in the case of households raising large livestock, 87 percent kept between nine or less large animals, such as cows (57 848 households) and buffalos (19 847 households). About 14 percent of households kept 10 or more large animals. [Ref. Fig. 4.2]

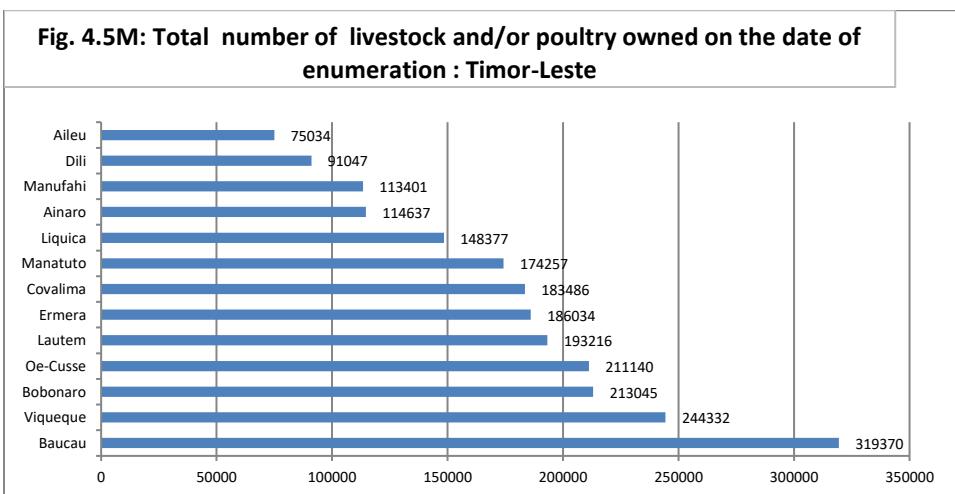

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Estimated 57 percent of agriculture households that raised poultry reported to keep less than 10 birds and nearly 2 percent kept 50 or more number of poultry birds. Further 42 percent of agriculture households kept 10 to 50 poultry birds. [Ref. Fig. 4.4]

NUMBER OF LIVESTOCK OWNED

Agricultural households owned 2.3 million livestock and poultry at the time of the census enumeration, or an average of 17 livestock. Among the municipalities, Baucau reported to own the highest number at 319 370 (14 percent) animals and birds, followed by Viqueque with some 244 332 (11 percent), Bobonaro with 213 045 (9 percent), and Oe-cusse with around 211 140 (9 percent). [Ref. Fig. 4.5M]

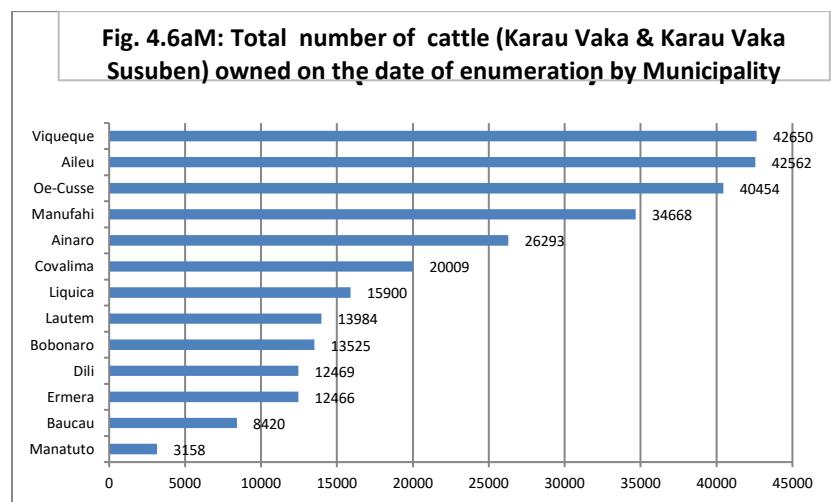

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

CATTLE, BUFFALO, PIG AND GOAT

Cattle: The most common large livestock raised in agricultural households were cattle and buffalo, though cattle were two and one-fourth times more numerous than buffalo. With an estimated 286 558 cattle in the country, on average of 2 cattle were raised per agriculture household. Aileu, Viqueque and Oe-cusse each accounted for 14 percent of the total number of cattle in the country, followed by Manufahi with some 12 percent and Ainero with some 9 percent of cattle. Cattle raised in Timor-Leste were of local breeds, except 857 which were reported of dairy cow (see Fig. 4.6aM).

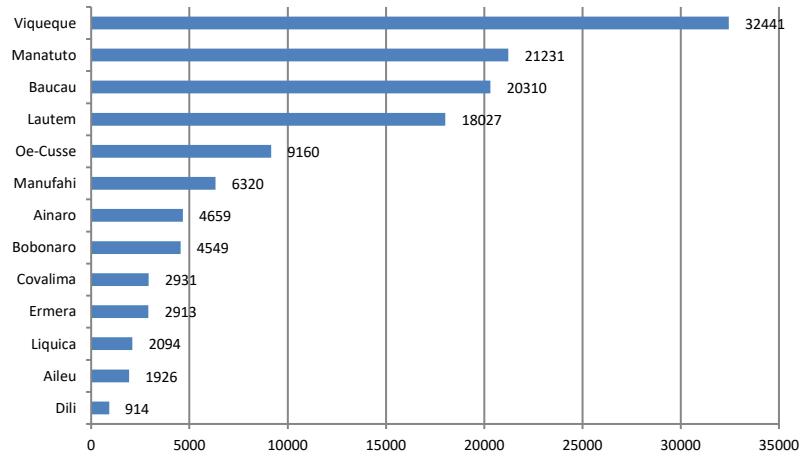

Buffalo: Agricultural households reported a total of some 127 475 buffalo with just over one-fourth located in Viqueque, followed by 17 percent in Manatuto, 16 percent in Baucau and 14 percent in Lautem. [Fig. 4.6bM].

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

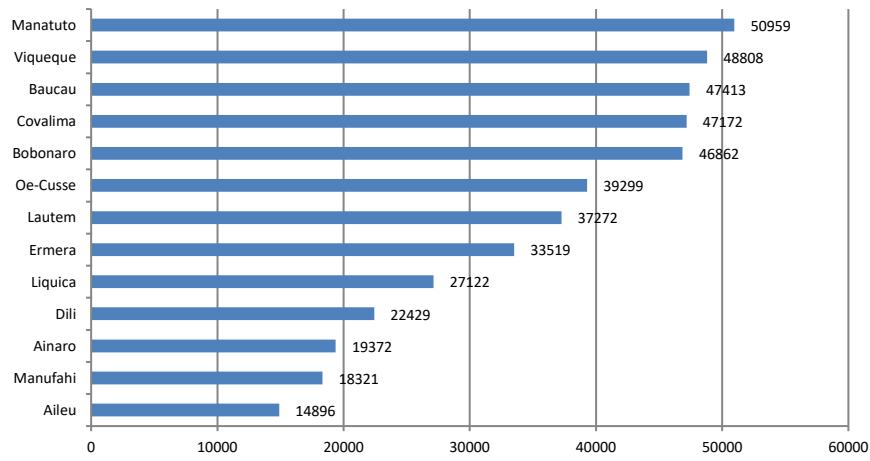

Pigs: The number of pigs raised in agricultural holdings totaled 453444 and accounted for 20 percent of all livestock and poultry and 69 percent of small livestock raised in the country. Agricultural households in Manatuto, Viqueque, Baucau, Covalima and Bobonaro reported raising the majority of pigs – each accounted for 10 percent or more (see Fig. 4.6cM).

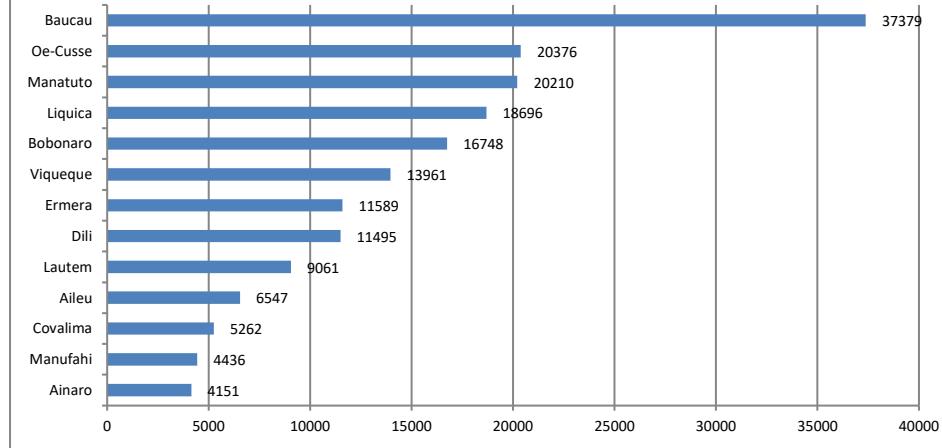

Fig. 4.6cM: Total number of pigs (Fahi) owned on the date of enumeration Municipality

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Goats: Agricultural households reported owning 179 911 goats. Baucau reported 21 percent (37 379), followed by 10 percent or more each in Oe-Cusse, Manatuto and Liquica (see Fig. 4.6dM).

Fig. 4.6dM: Total number of goat (Bibi Timur) owned on the date of enumeration by Municipality

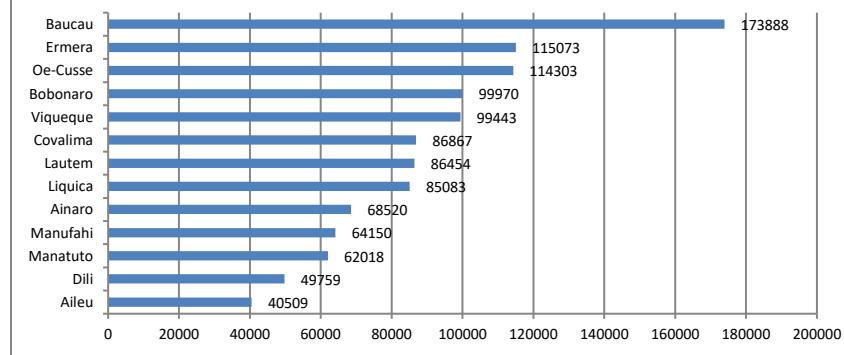

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

CHICKENS AND DUCKS

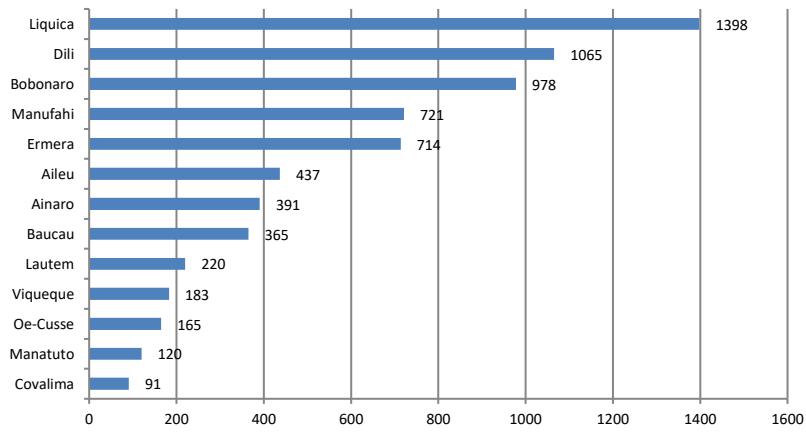

Chickens and ducks, an important source of protein, were the most common poultry raised by agricultural households with an estimated 1 146 037 chickens and 6 848 ducks reported at the time of enumeration. Baucau led all other municipalities reporting 17 388 chickens, followed by Ermera, Oe-Cusse and Bobonaro reporting with 115 073, 114 303, and 99 970 chickens, respectively. Liquica reported the most number of ducks 1 398, followed closely by Dili and Bobonero reporting with 1 065 and 978 ducks, respectively. [Ref. Figs. 4.6eM and 4.6fM]

Fig. 4.6f: Total number of duck (Manu Rade) owned on the date of enumeration Municipality

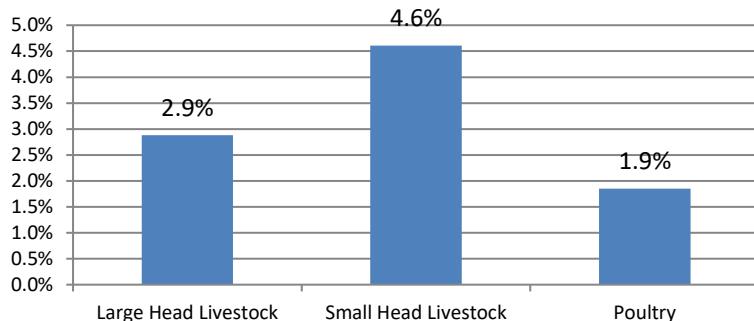

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

VETERINARY SERVICES

Among the agricultural households that were raising livestock and poultry, 7 748 (6 percent) reported the use of at least veterinary service, namely, vaccination, artificial insemination, castration and treatment of sickness. Of the veterinary service users, about 80 percent (6 183) reported the use for small animals, followed by 50 percent (3 867) used for large animals and 32 percent (2486) for poultry. [Ref. Fig. 4.7]

Fig. 4.7: Percentage of agriculture households reporting any use of veterinary services by type of livestock: Timor-Leste

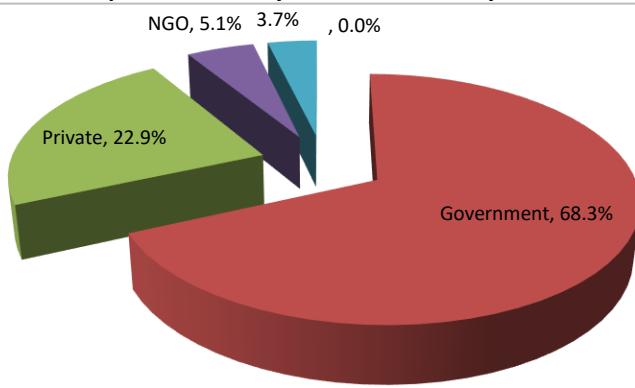

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

SOURCE OF VETERINARY SERVICES

Government played the major role in providing veterinary services and provided it to 68 percent of agriculture households reporting its use. Twenty-three percent of agriculture households obtained the service from private agencies and another 5 percent from NGOs. [Ref. Fig. 4.8]

Among all the four types of services, vaccination was used in most cases (70 percent and over), followed by treatment of sickness (22 percent cases). [Ref. Table A.25 of appendix]

Fig. 4.8: Percentage of agriculture households reporting any use of veterinary services during last 12 months prior to the day of enumeration by source of use: Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

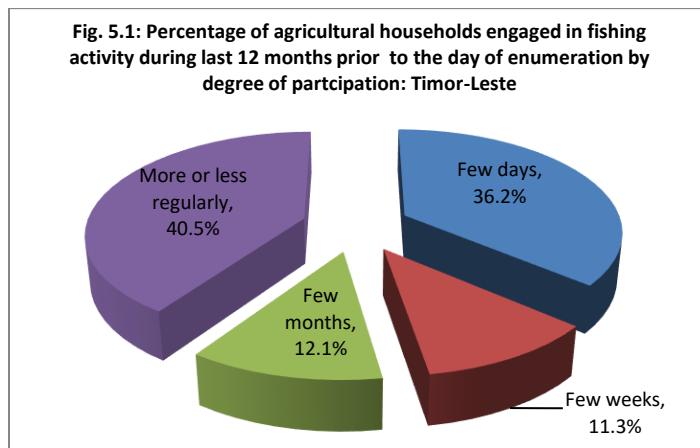

MACHINERY AND EQUIPMENT

Use of two types of equipment and machinery were reported in the agriculture census and they are *makina halo aihan ba Animal* and *Fatin fohan manu ba*. Only 793 agricultural households reported using *Fatin fohan manu ba*, and another 104 households used *makina halo aihan ba Animal*. They owned most of the equipments and a few households, 77 and 7 households, respectively used it from government sources.

CHAPTER FIVE: FISHING AND AQUACULTURE

FISHING

Fishing and aquaculture constituted an alternate or additional economic activity for agricultural households in Timor-Leste. Most households engaged in fishing were located near the available fishing grounds, likely to be in the coastal areas. For the purposes of the census, fishing was defined as catching fish and other sea and river species in rivers, coastal waters and other water bodies with or without use of boats and specialized equipment.

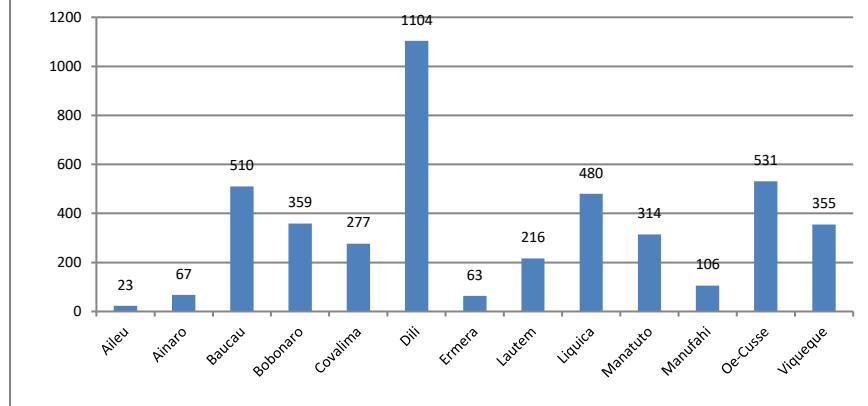

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Only 4 405 (3.1 percent) of all agricultural households were engaged in fishing. While about 48 percent of them did so for a few days to few weeks during the last 12 months prior to the day of enumeration, the remaining 52 percent did fishing more or less regularly or for some months during the reference period. [Ref. Fig. 5.1]

Of the total number of households engaged in fishing, a large number of households were engaged solely in fishing and a few were involved in fishing and other agricultural activities. About 3 632 (nearly 2 percent) of all households in the country reported to depend solely on fishing for their livelihood.

Fig. 5.2M: Number of agricultural households engaged in fishing activity during last 12 months prior to the day of enumeration by municipality

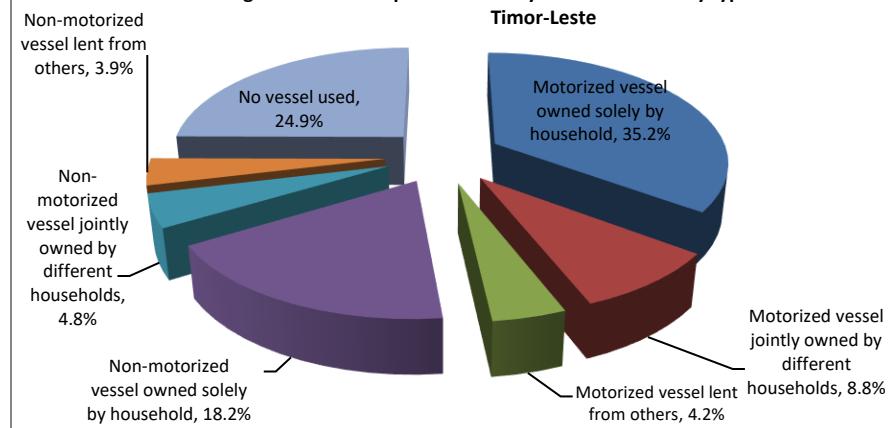

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Based on the number of households, Dili - a coastal and urban municipality - had the largest number of agricultural households (1104) engaged in fishing as compared to other municipalities. Aileu, on the other hand, reported 23 households engaged only in fishing activities, closely followed by Ermera with 63 and Ainaro with 67. Other municipalities reporting more than 500 agricultural households engaged in fishing included Baucau and Oe-cusse. [Ref. Fig. 5.2M]

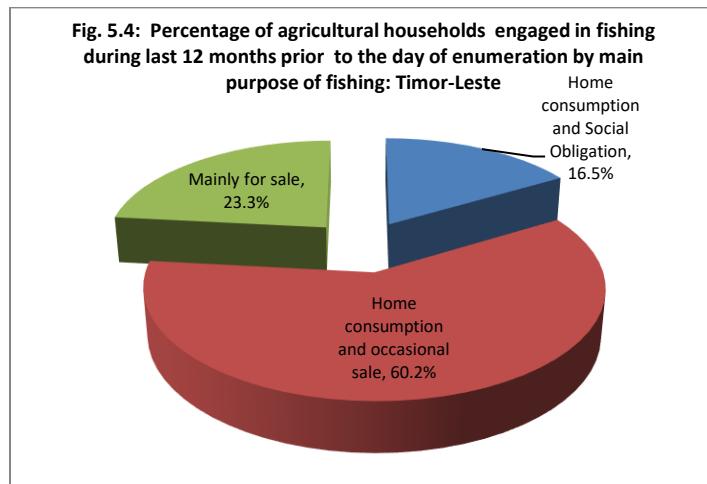

TYPE OF VESSEL USED

While 25 percent of agriculture households engaged in fishing did not use any vessel for fishing, among those who did, the most commonly used vessel was a motorized vessel owned solely by household, reported by some 35 percent of households. A further 18 percent reported ownership of non-motorized vessels owned solely by the household. Another 9 percent of households used motorized vessels jointly owned by different households and 4 percent each used non-motorized and motorised vessel lent from others. Municipality level estimates may be seen in Table A.27 in the appendix. [Ref. Fig. 5.3]

Fig. 5.3: Percentage of agricultural households reporting use of vessel for fishing during last 12 months prior to the day of enumeration by type of vessel used:

MAIN PURPOSE OF FISHING

Around 60 percent of the 4 405 agricultural households engaged in fishing in Timor-Leste did so mainly to meet their household consumption and occasional needs. Fishing mainly for sale was reported by 23 percent of households, and for home consumption and social obligation was reported by another around 16 percent. This was the pattern across the municipalities where a significant number of agriculture households were engaged in fishing. [Ref. Fig. 5.4]

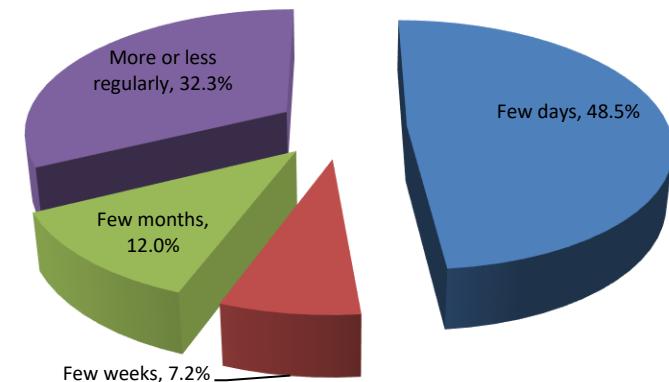

AQUACULTURE

Aquaculture refers to the cultivation, under controlled conditions, of aquatic products such as fish, crustaceans, seaweed and other aquatic resources in seas, lakes, rivers and swamps, or other bodies of water such as ponds, pens and seaweed cultures. Around 4 543 agricultural households were engaged in aquaculture activities in Timor-Leste, representing just 3.2 percent of all agricultural households.

About 56 percent of the agriculture households engaged in aquaculture pursued the activities for a few days to a few weeks during the last 12 months prior to the day of enumeration, while 44 percent did so more or less regularly or for some months during the reference period. [Ref. Fig. 5.5]

Like fishing activity, a large number of agriculture households were solely engaged only in aquaculture and a few were involved in fishing and other agricultural activities. About 2 069 (nearly 1 percent) of all households in the country relied only on aquaculture activity for their livelihood. [Ref. Table A.1 of appendix]

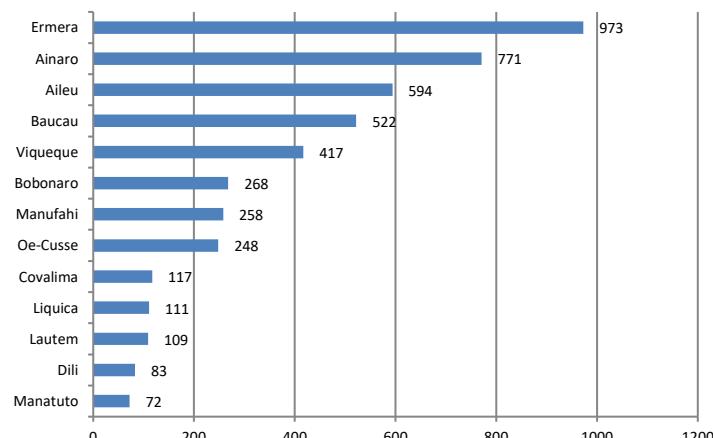

Fig. 5.5: Percentage of agricultural households engaged in aquaculture activity during last 12 months prior to the day of enumeration by degree of participation: Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Ermera had the largest number of households (973) engaged in aquaculture activity among all the municipalities. Other municipalities with more than 500 agricultural households engaged in aquaculture activity included Ainaro, Aileu and Baucau. Manatuto reported the least number with 72 households engaged in aquaculture activities, closely followed by Dili with 83, Lautem with 109 and Liquica with 111 only. [Ref. Fig. 5.6]

Fig. 5.6: Number of agricultural households engaged in aquaculture activity during last 12 months prior to the day of enumeration by municipality

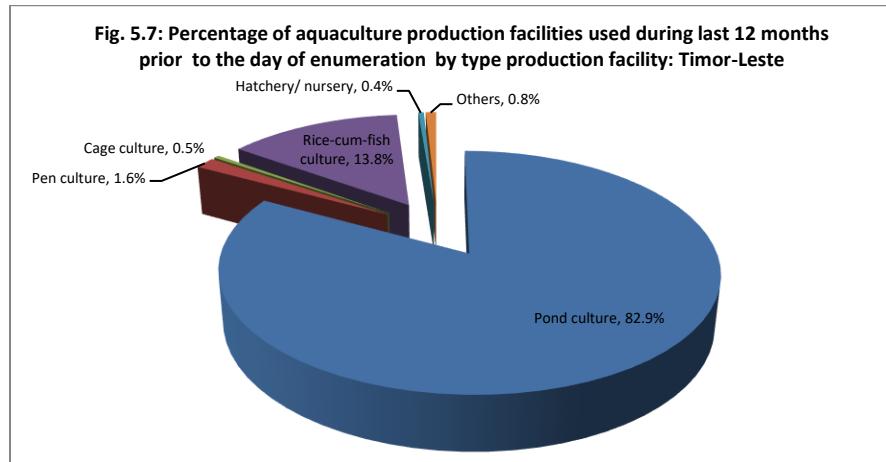

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

PRODUCTION FACILITY

Various types of production facilities were used for aquaculture activity in Timor-Leste and were pond culture, pen culture, cage culture, rice-cum-fish and hatchery/ nursery culture. Agricultural households

engaged in aquaculture activities reported that they operated more than one type of production facility. In fact, 4 543 households engaged in aquaculture activities had 4 857 production facilities.

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

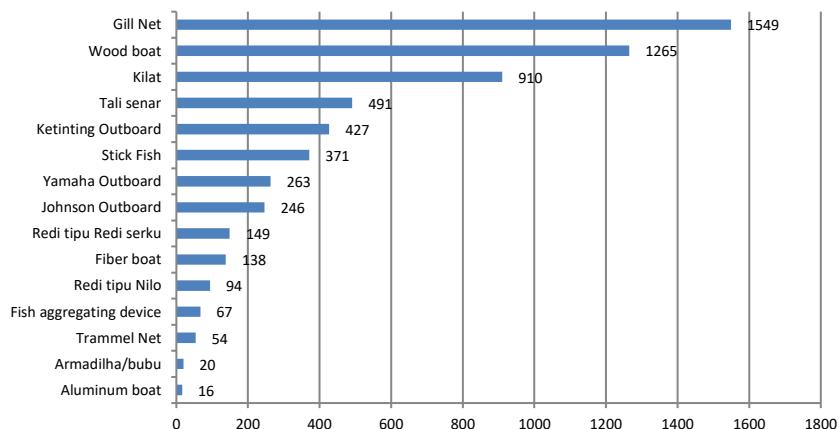

Eighty-three percent of the agricultural households engaged in aquaculture activities were involved in breeding or rearing aquatic plants or animals in ‘pond culture’ enclosures. Another 14 percent were involved in rice-cum-fish culture. Three percent were involved in pen culture (a net enclosure from above water level down to the floor of the river, lake, sea, etc.). This feature on the type of facilities is more or less seen across the municipalities (see Table A.30 in the appendix). [Ref. Fig. 5.7]

MACHINERY AND EQUIPMENT USED FOR FISHING AND AQUACULTURE

The most commonly used equipment and facilities reported by those engaged in fishing and aquaculture was gill net at 26 percent, followed by wood boat at 21 percent, kilat at 15 percent, tali senar and ketinting outboard at 8 percent each. Aluminum boats were used least by only 16 agriculture households. Stock of equipment/machinery owned by an agriculture household on average was around 39 for carrying out fishing and aquaculture activity. [Ref. Fig. 5.8]

Most households (95 percent) reported use from their own source and some from private (3 percent) or from government (1 percent) agencies. This feature remains the same across the municipalities (see Table A.31 in the appendix).

Fig. 5.8: Number of agricultural households reporting use of machine and equipment during last 12 months prior to the day of enumeration for fishing and aquiculture: Timor-Leste

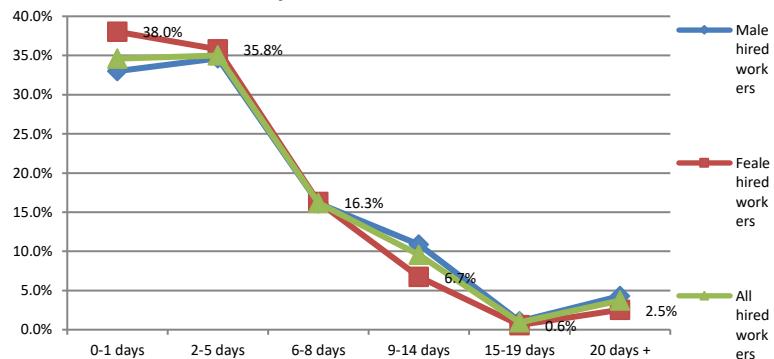

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

HIRED WORKERS ENGAGED IN AGRICULTURE

Agriculture households reported to hire some 71 566 labors during the last 12 months prior to the date of enumeration and of them, 69 percent were males and 31 percent females. Most of the hired labors worked in the farm for full-time with 64 percent. On average agricultural households hired one agricultural worker during the reference year.

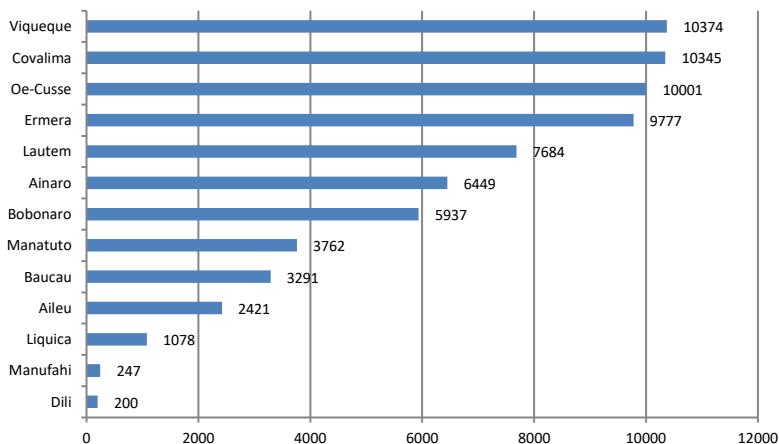

Among hired labor, many worked on average for 5 or less days and they accounted for 69 percent. A small number of hired workers, accounting for only 5 percent, worked for 15 days or more. The corresponding percentages were 68 and 5 percent, respectively for male workers; and 74 and 3 percent, respectively for female workers. The distribution of hired labor over male-female, full-time and part-time, and number of days engaged, may be seen in Fig. 5.10 and Fig. 5.11. However, country level pattern is reflected across the municipalities (see Table A.32 in the appendix). [Ref. Figs. 5.9, 5.10M & 5.11M]

Fig. 5.11M: Number of workers hired by average number days worked during last 12 months prior to the day of enumeration by municipality

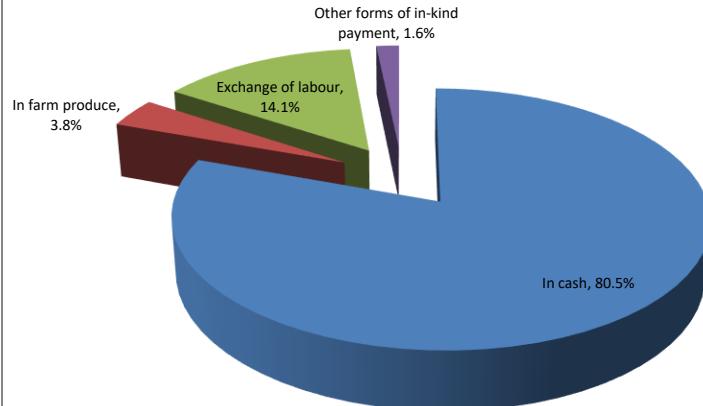

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

TERMS OF PAYMENT TO HIRED LABOR

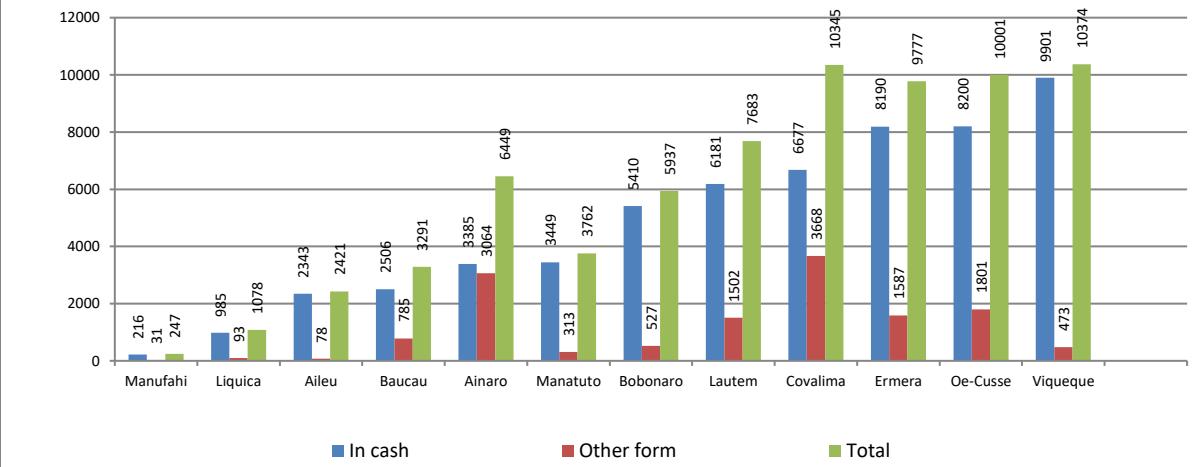

More than 80 percent of labor hired for agriculture activities were paid in cash, while 14 percent were paid in labor exchange. Remaining hired labor were paid either in farm produce (4 percent) or in other in-kind payments (2 percent). Patterns across the municipalities is revealed in Fig. 5.13M. [Ref. Figs. 5.12 & 5.13M]

CHAPTER SIX: AGRICULTURAL HOUSEHOLDS AND POPULATION

HOUSEHOLDS

While the estimated number of private households in Timor-Leste totaled 204 597 in PHC 2015, the agricultural census in 2019 counted a higher figure of 213 417 households, for a 4.3 percent growth over a period of a little more than 4 years. The households that were counted at the time of enumeration reported including some 1.21 million people in 2019, of which 764 216 were living within agricultural holdings, accounting for 63 percent of the total population of the country. The average size of a household was 5.7 while the average size of an agriculture household was 5.4. There were almost equal numbers of males (50.4 percent) and females (49.6 percent) within the agricultural household population.

Around 66 percent of agricultural households counted in TLAC 2019 reported engaging in crop cultivation and/or raising livestock and poultry within their own agricultural holdings.

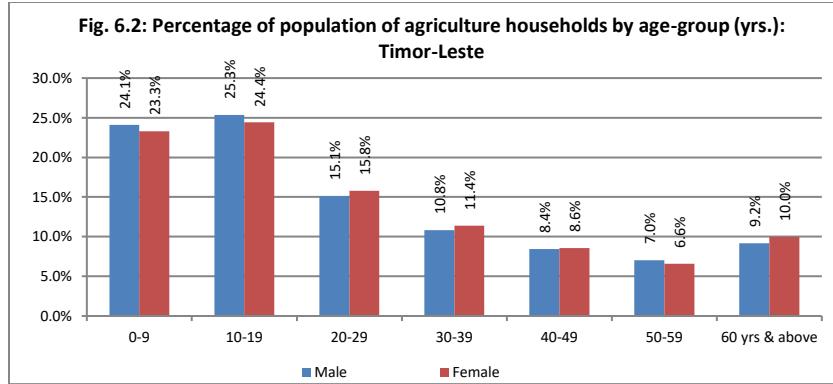

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Baucau had the highest percentage of their people living in agriculture households, while Manatuto had the lowest. Besides, Ermera, Bobonaro, Oe-cusse, Viqueque and Liquica were the top six most populous municipalities each with 60 000 or more people in agricultural households. [Ref. Fig. 6.1M]

POPULATION BY AGE GROUP

Males and females aged between 10 and 19 years old constituted the largest age group, accounting for around 25 percent of all agricultural household members, followed by 20 to 29 year olds who accounted for around 16 percent. There were 1 percent more males than females in the 10 to 19 age group; almost equal numbers in the 20 to 29 age group; and 1 percent more females than males in the 60 years and above age group. Agricultural household members aged below 10 years constituted some 24 percent of the total population in agricultural households. [Ref. Fig. 6.2]

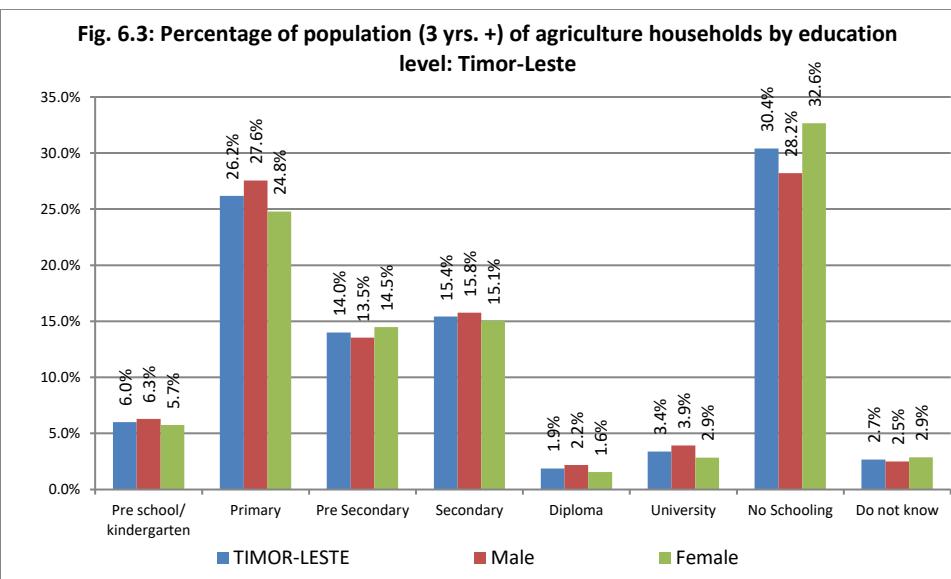

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

RELATIONSHIP TO HOUSEHOLD HEAD

For all households, the household head constituted 18 percent of the total population. The proportion of the male heads (29 percent) to the total male populations was greater than the proportion of the female heads (6 percent) to the total female population. On the other hand, only 1 percent of the total male population self-identified as spouses to a female household head, compared to the 28 percent of the female population that self-identified as a spouse of a male household heads. Sons and daughters composed the highest percentage of the total population, reported at 50 percent.

EDUCATION ATTAINMENT

About 30 percent of the total population aged 3 years and older of agricultural households reported no schooling, and a further 32 percent reported their highest educational attainment at primary or pre-school/kindergarten. Another 14 percent completed pre-secondary level, 15 percent completed secondary and 3 percent completed university level education. Generally, few members of agricultural households completed higher education, and participation was lower for females than males. For example, 22 percent of the male population aged 3 years and older completed secondary and above level of education, whereas 20 percent of females in the same age-group achieved that level. Moreover, 33 percent of the females reported no schooling against that of 28 percent of males in agricultural households. [Ref. Fig. 6.3].

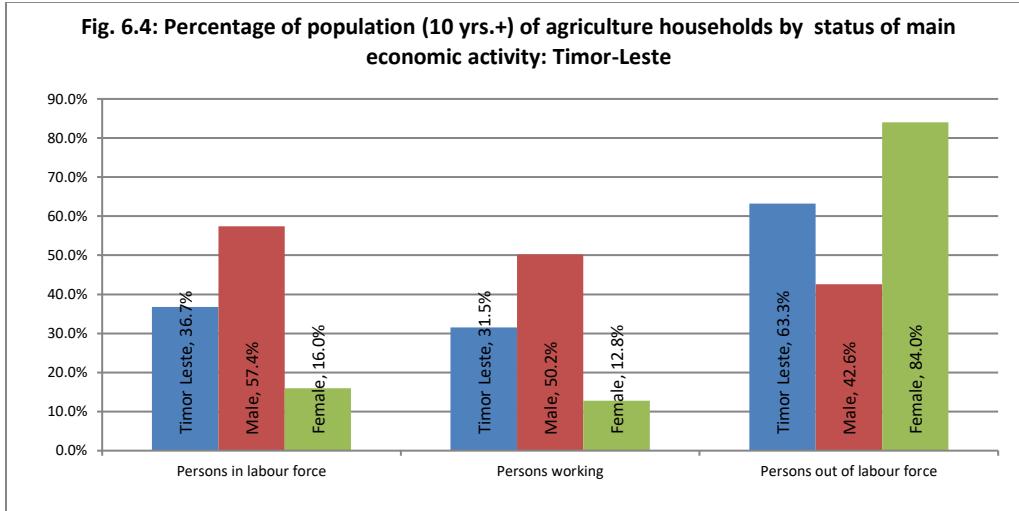

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

STATUS OF MAIN ECONOMIC ACTIVITY

Status of main economic activity refers to the main or usual activity undertaken most of the time during the past week by each household member 10 years old and over. A household member might operate his/her own farm or business or engage independently in a profession or trade and employ one or more paid workers, or generate his/her income directly from customers, clients or other organizations including activities in agriculture sector for subsistence or sale, or work in the household farm or business without pay of any kind and in return for shares his/her livelihood from the household as a member. Besides, a person may work for a government/ private firm or company such as hotels, restaurants, departmental store, etc. for wage or salary. All such persons are considered as workers.

Persons not working are considered unemployed if they are available for work and seeking work. The labour force consists of workers, as defined above, and the unemployed. There is a third category of persons in the population who are neither working nor seeking nor available for work, such as, full-time homemakers, students, retired persons, etc., and they are called persons out of labor force.

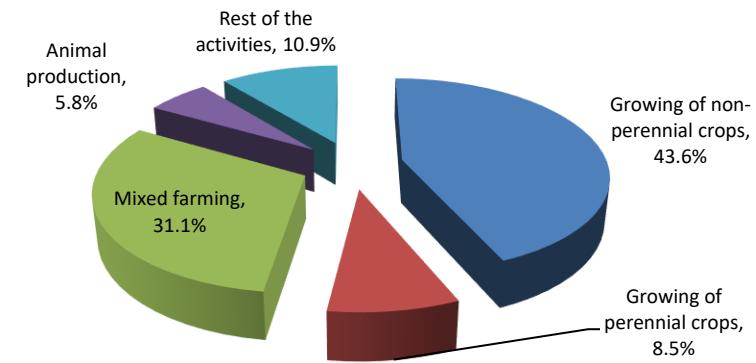

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

Thirty seven percent of the population age 10 years and above reported working or available for work, that is, they were in the labor force, while 32 percent reported working – indicating that 5 percent of population aged 10 years and above were unemployed (not working and seeking and available for work). As much as 63 percent of the population was out of the labor force, and consisted of homemakers, students, retired persons, disabled persons and other persons who were neither working nor seeking/available for work. The difference between male and female is pronounced: more males than females reported working and available for work, as can be seen in Fig. 6.4. On the other hand, more females than males were out of labor force. [Ref. Fig. 6.4]

INDUSTRY OF ACTIVITY

About 44 percent of workers reported to be engaged in the growing of non-perennial crops, followed by mixed farming (31 percent) and growing of perennial crops (9 percent). Other activities, such as plant propagation tubers, support activities to agriculture, logging, hunting trapping and related service, fishing, aquaculture, etc., accounted for 11 percent. There was a marginal difference in this pattern between male workers and female workers as can be seen in Table 5.1 below. [Ref. Fig. 6.5]

Fig. 6.5: Percentage of working Population (10 yrs.+) of agriculture households by industry of activity: Timor-Leste

Source: GDS-MoF, Timor-Leste Agriculture Census: 2019

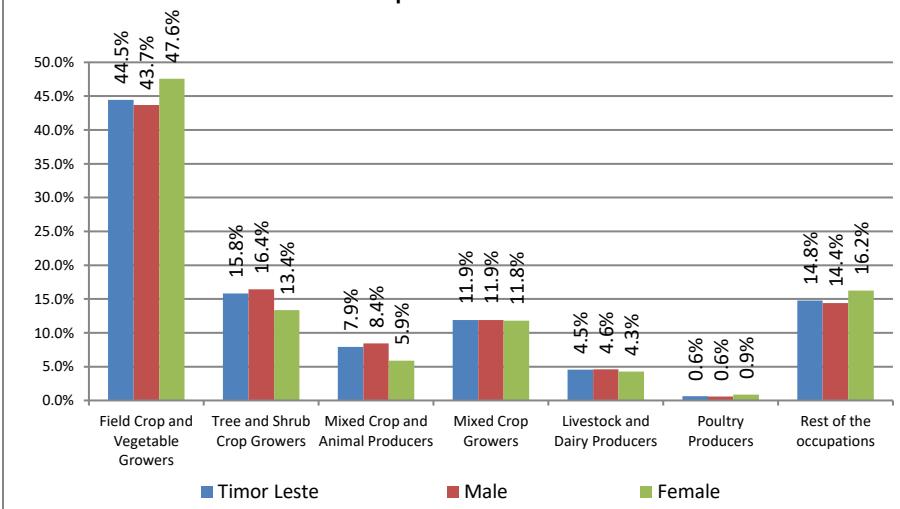

Table 5.1: Percentage of working population (10 yrs.+) of agriculture households by industry of activity: Timor-Leste

Sex of Worker	Growing of non-perennial crops	Growing of perennial crops	Mixed farming	Animal production	Other activities
All	43.6%	8.5%	31.1%	5.8%	10.9%
Male	43.6%	8.9%	31.1%	5.9%	10.5%
Female	43.6%	7.0%	31.2%	5.4%	12.8%

OCCUPATION

About 45 percent of the working population reported growing of field crops and vegetables as their main occupation in Timor-Leste, which was slightly lower among working males (44 percent) compared to working females (46 percent). About 16 percent of male workers reported growing trees and shrub crops as their main occupation, compared to 14 percent of female workers; while growing of mixed crop and livestock raising was reported as the main occupation by 8 percent and 6 percent of male and female workers, respectively. [Ref. Fig. 6.6]
